NEW FEATURES

Directory Sync Management

Directory Sync Management (DSM) allows users/clients to connect to the LDAP server in order to validate users by using LDAP. It enables them to sync Extensions in a faster way by using Extension Template and selecting generic configuration settings for Extensions. Users may also select personalized settings for certain Extensions and apply different changes if needed.

The screenshot displays the 'Directory Sync Management' configuration page for Tenant 200. The interface includes a left-hand navigation menu with options like 'Home', 'Settings', 'Default Trunks', 'UAD', 'Access Codes', 'Parking Lots', 'Numbering Defaults', 'Central Phone Book', 'Directory Sync Management', 'E-mail Templates', 'Speed Dial', 'CLI Routing', and 'About'. The main content area is divided into two sections: 'Configuration' and 'Attributes'. The 'Configuration' section features a toggle for 'Enable' (turned on), and input fields for 'Hostname', 'Port' (389), 'Encryption' (SSL/TLS), 'Login DN', 'Password', 'Base DN', and 'Sync Period (hours)' (1). Below these are buttons for 'Extension Template', 'Test', and 'Sync'. The 'Attributes' section contains input fields for 'Name' (cn), 'Login (E-mail)' (userPrincipalName), 'Unique ID' (objectGUID), 'Sync' (extSync), 'Extension Number', 'Status', 'UAD', 'UAD Location', 'MAC Address', 'Department', and 'Account Balance'. A 'Summary E-mail' section includes 'Send E-mail' (Yes/No/Not Set), 'Errors only' (Yes/No/Not Set), and a 'Notification E-mail' field (test@test.com). A 'Notifications' section has an 'E-mail Extension data to users' field (Yes/No/Not Set). A 'Save' button is located at the bottom right.

Set an External address for SIP/RTP/ICE

Added support for recognizing the local and external IP addresses automatically even when behind NAT ('Placeholders' are added to the 'External IP address (:UDP port)' and 'Local networks (separated by newline)' fields)

Bug Fixes and Improvements

- › Clickhouse: Fixed an issue where VPS would fail to connect to Clickhouse
- › Ring Group: Limit for number of extensions to dial is now 30 instead of 9
- › PJSIP: Exposed 'TLS handshake timeout' and 'keep alive' options
- › PWProxy: Fix bug where call is not visible on Dashboard and Monitor pages for tenant DID calls
- › Meeting: Fixed an issue where the client app would not enter the state "waiting for organizer to start the meeting" if joined by number and the meeting was not started.
- › Meeting: Added join link to meeting details
- › Meeting: Added support for public meetings.
