Table of Contents

- gloCOM GO iOS/Android 1**
 - Search for chats and messages from the chats list 1
 - Search for messages from a single conversation 1
 - Full chat sync 2
 - Synced favorites 3
 - Delete multiple external contacts..... 5

Search for chats and messages from the chats list

The Search feature allows users to find chats and messages from a single search bar above the Chats list. Results are split into two sections — **Chats** with up to 4 matching chats with a Show More option to retrieve additional results, and the **Messages** lists individual messages with the searched word highlighted.

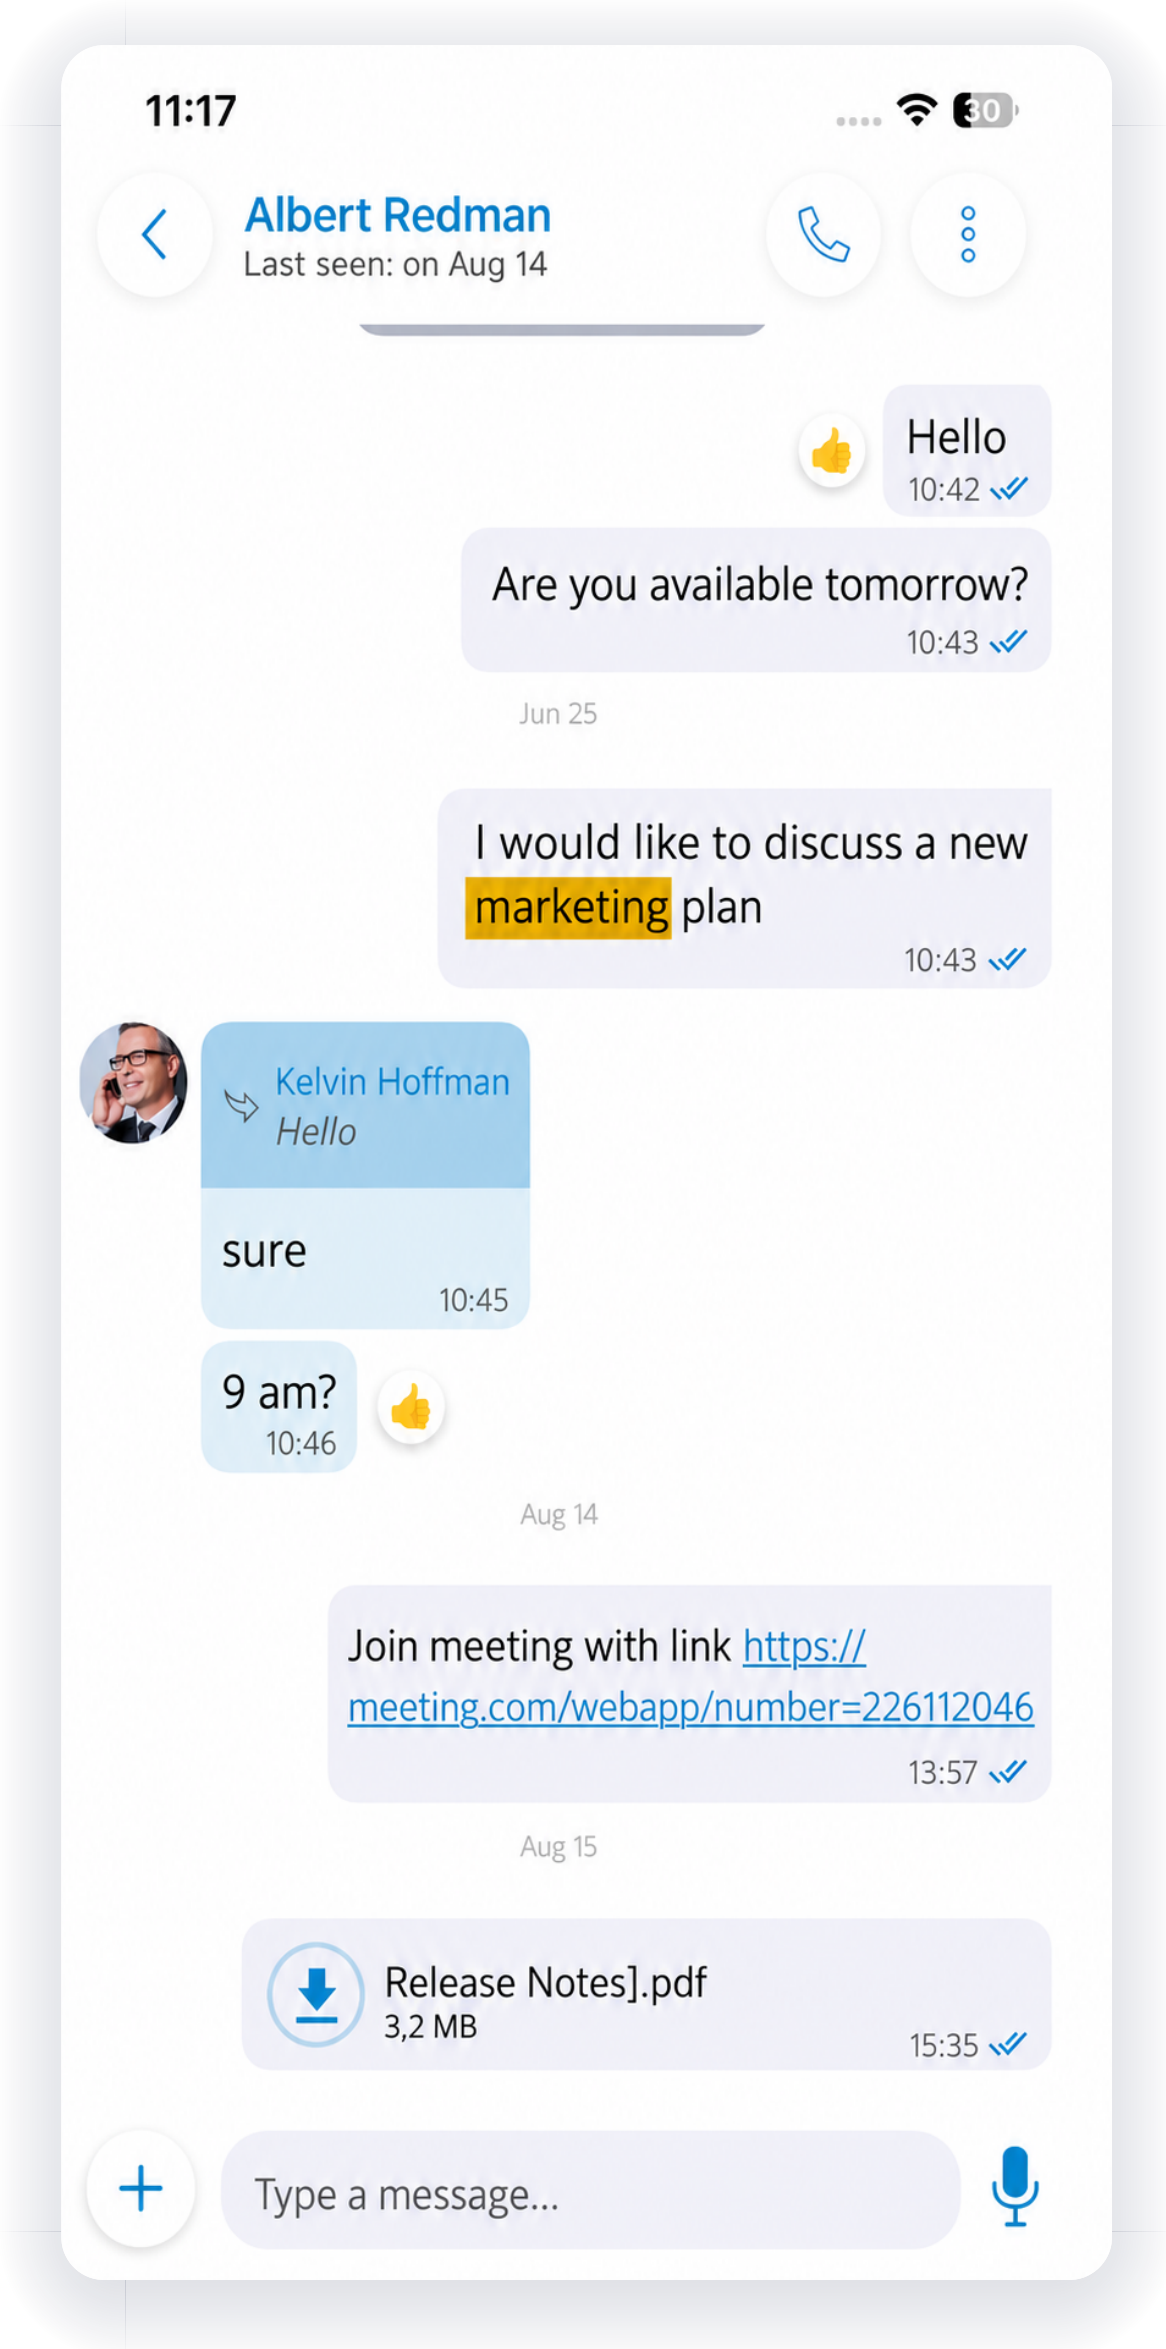

Tapping a message search result opens the conversation, scrolls to the matched message, and highlights it to indicate its location.

Search for messages from a single conversation

The Search messages feature allows users to search through messages within a single chat conversation. Tapping the search button opens a dedicated search screen where results are displayed as a list of matching messages, each showing information about who sent the message. Tapping a result opens the conversation, scrolls to the matched message, and briefly animates it to indicate its location. Additionally, the search can

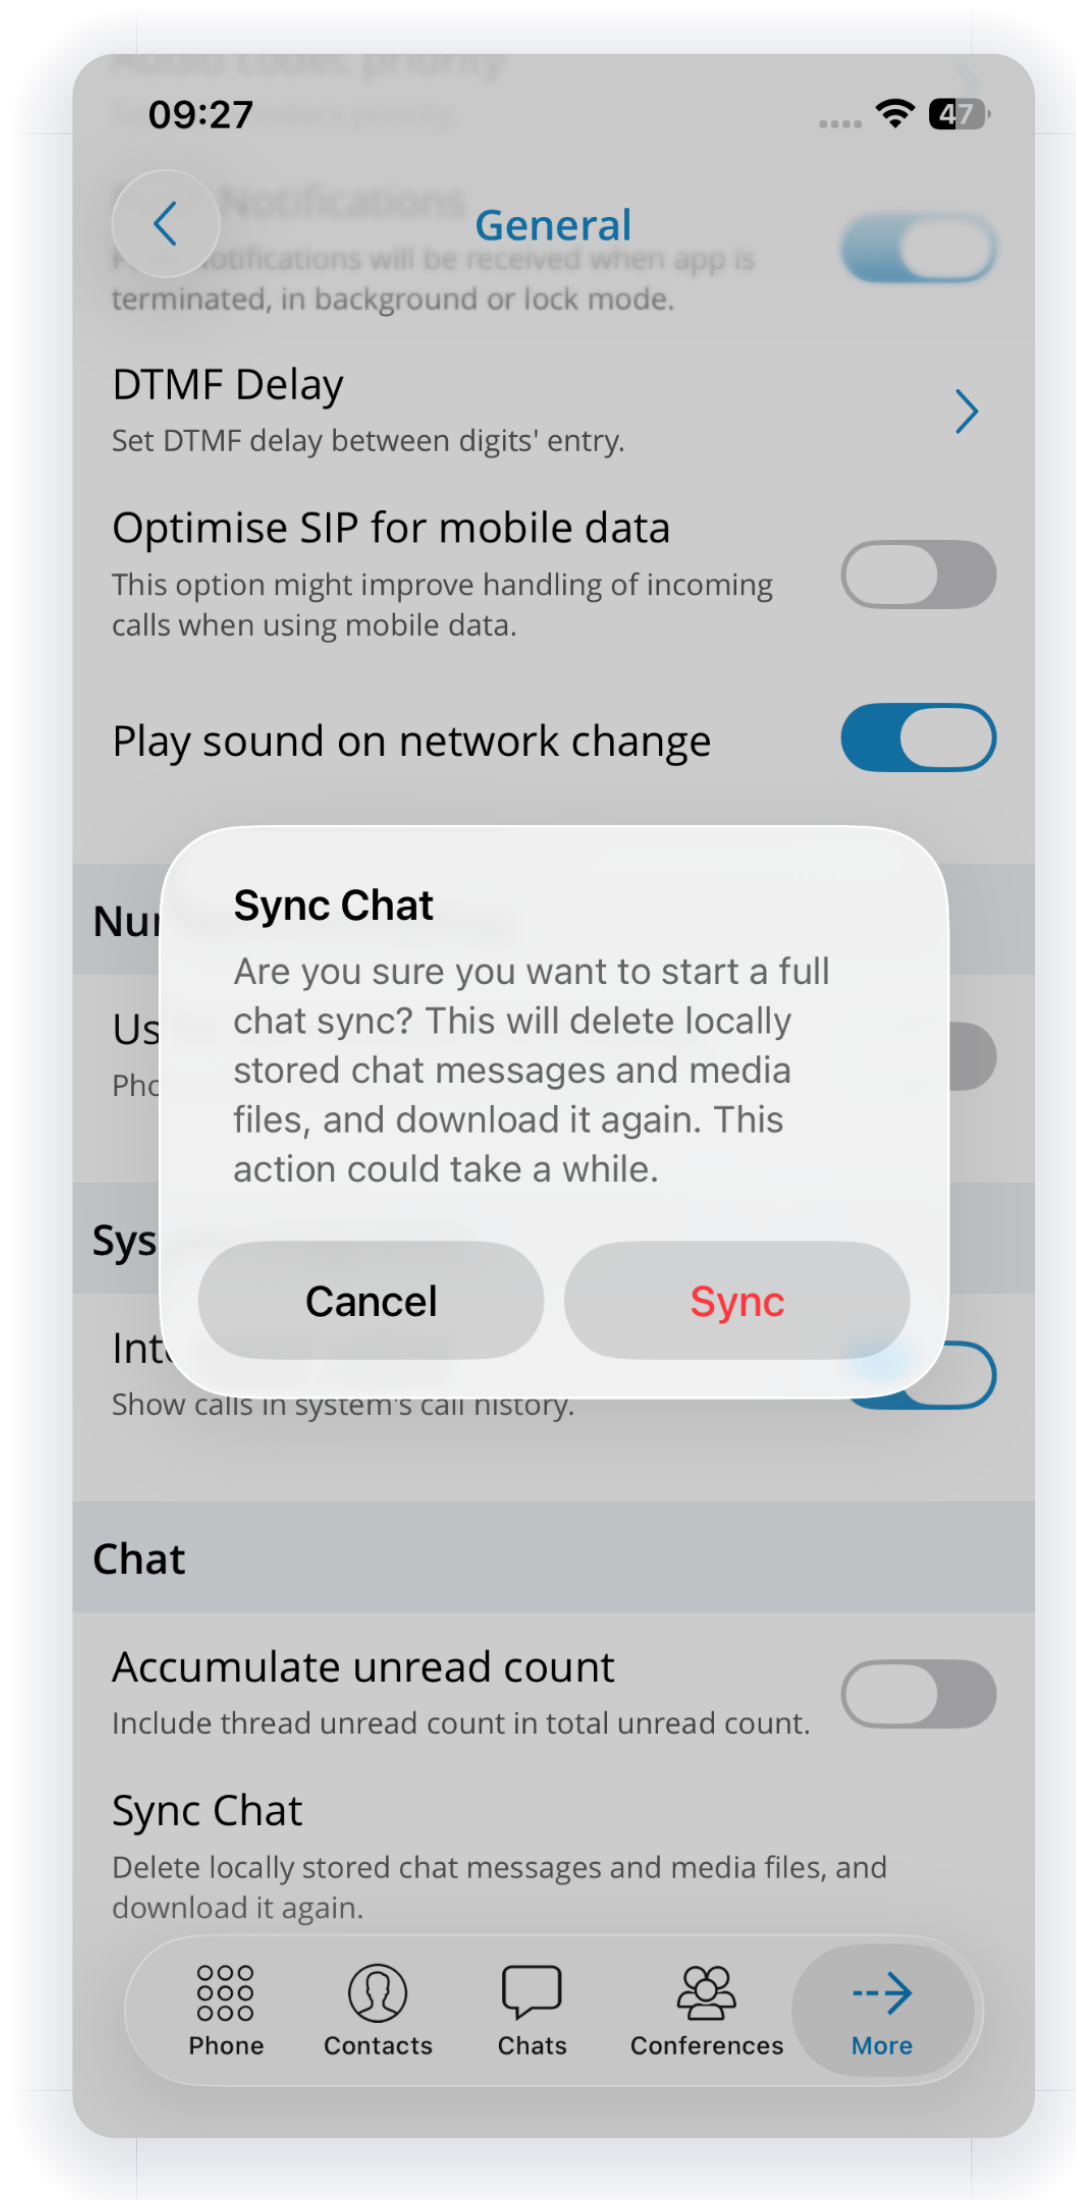

also be accessed from the Chat Info screen via the "Search messages in this conversation" option.

Full chat sync

The full Chat Sync feature ensures that chat history is fully synchronized on mobile devices. For new users, a full chat sync is performed automatically immediately after successful login.

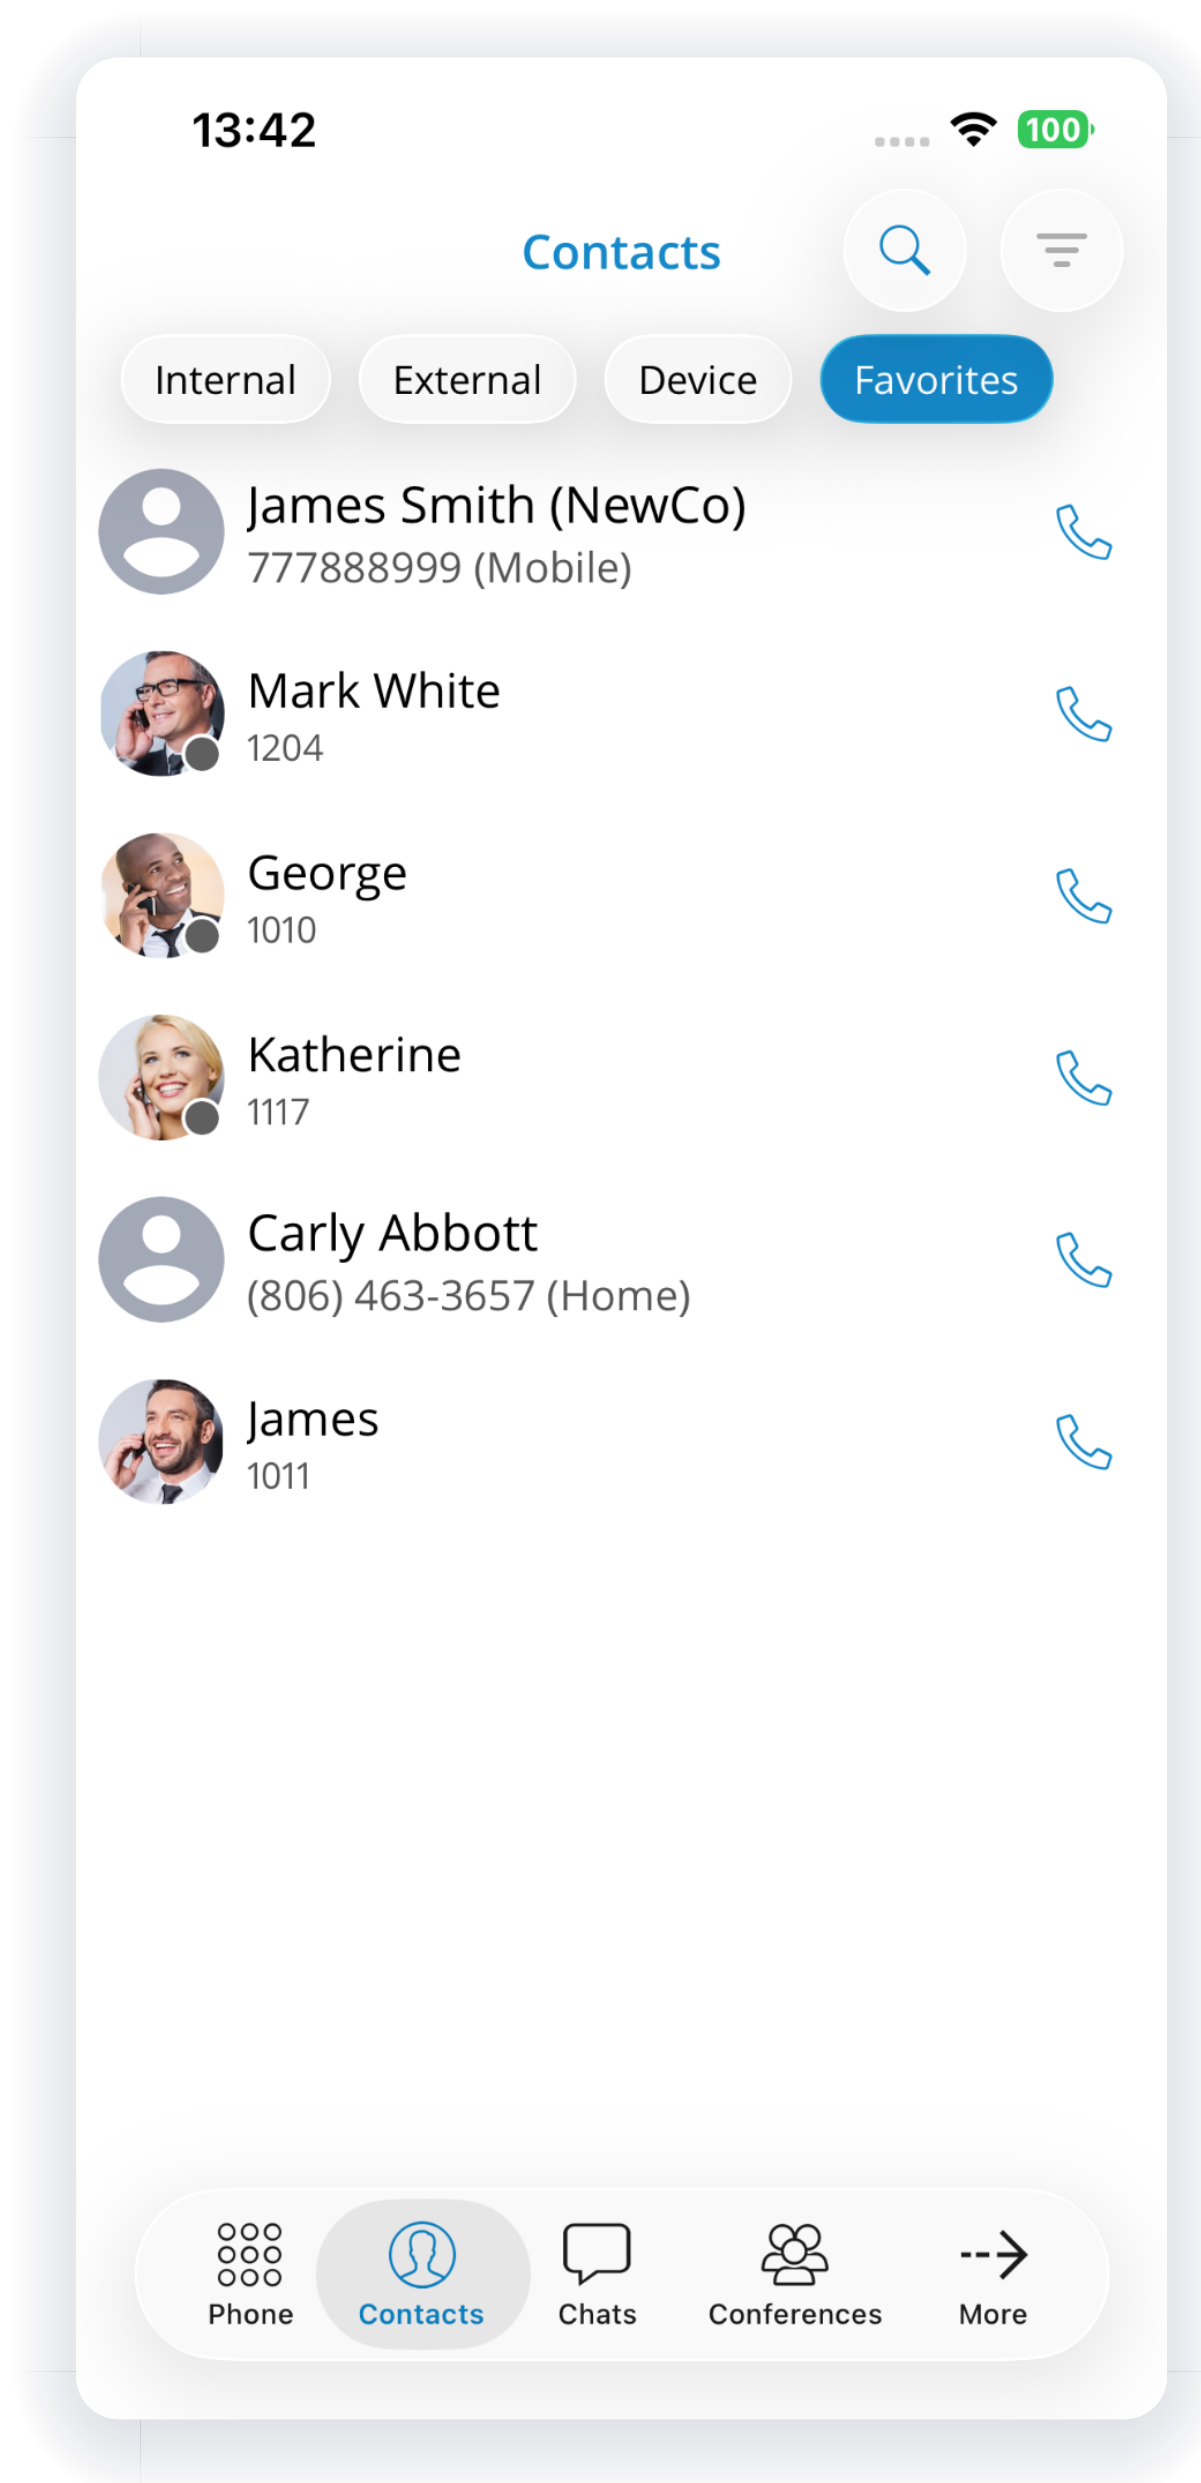

Existing logged-in users can start a full manual sync at any time by tapping the Sync Chat button in the application's general.

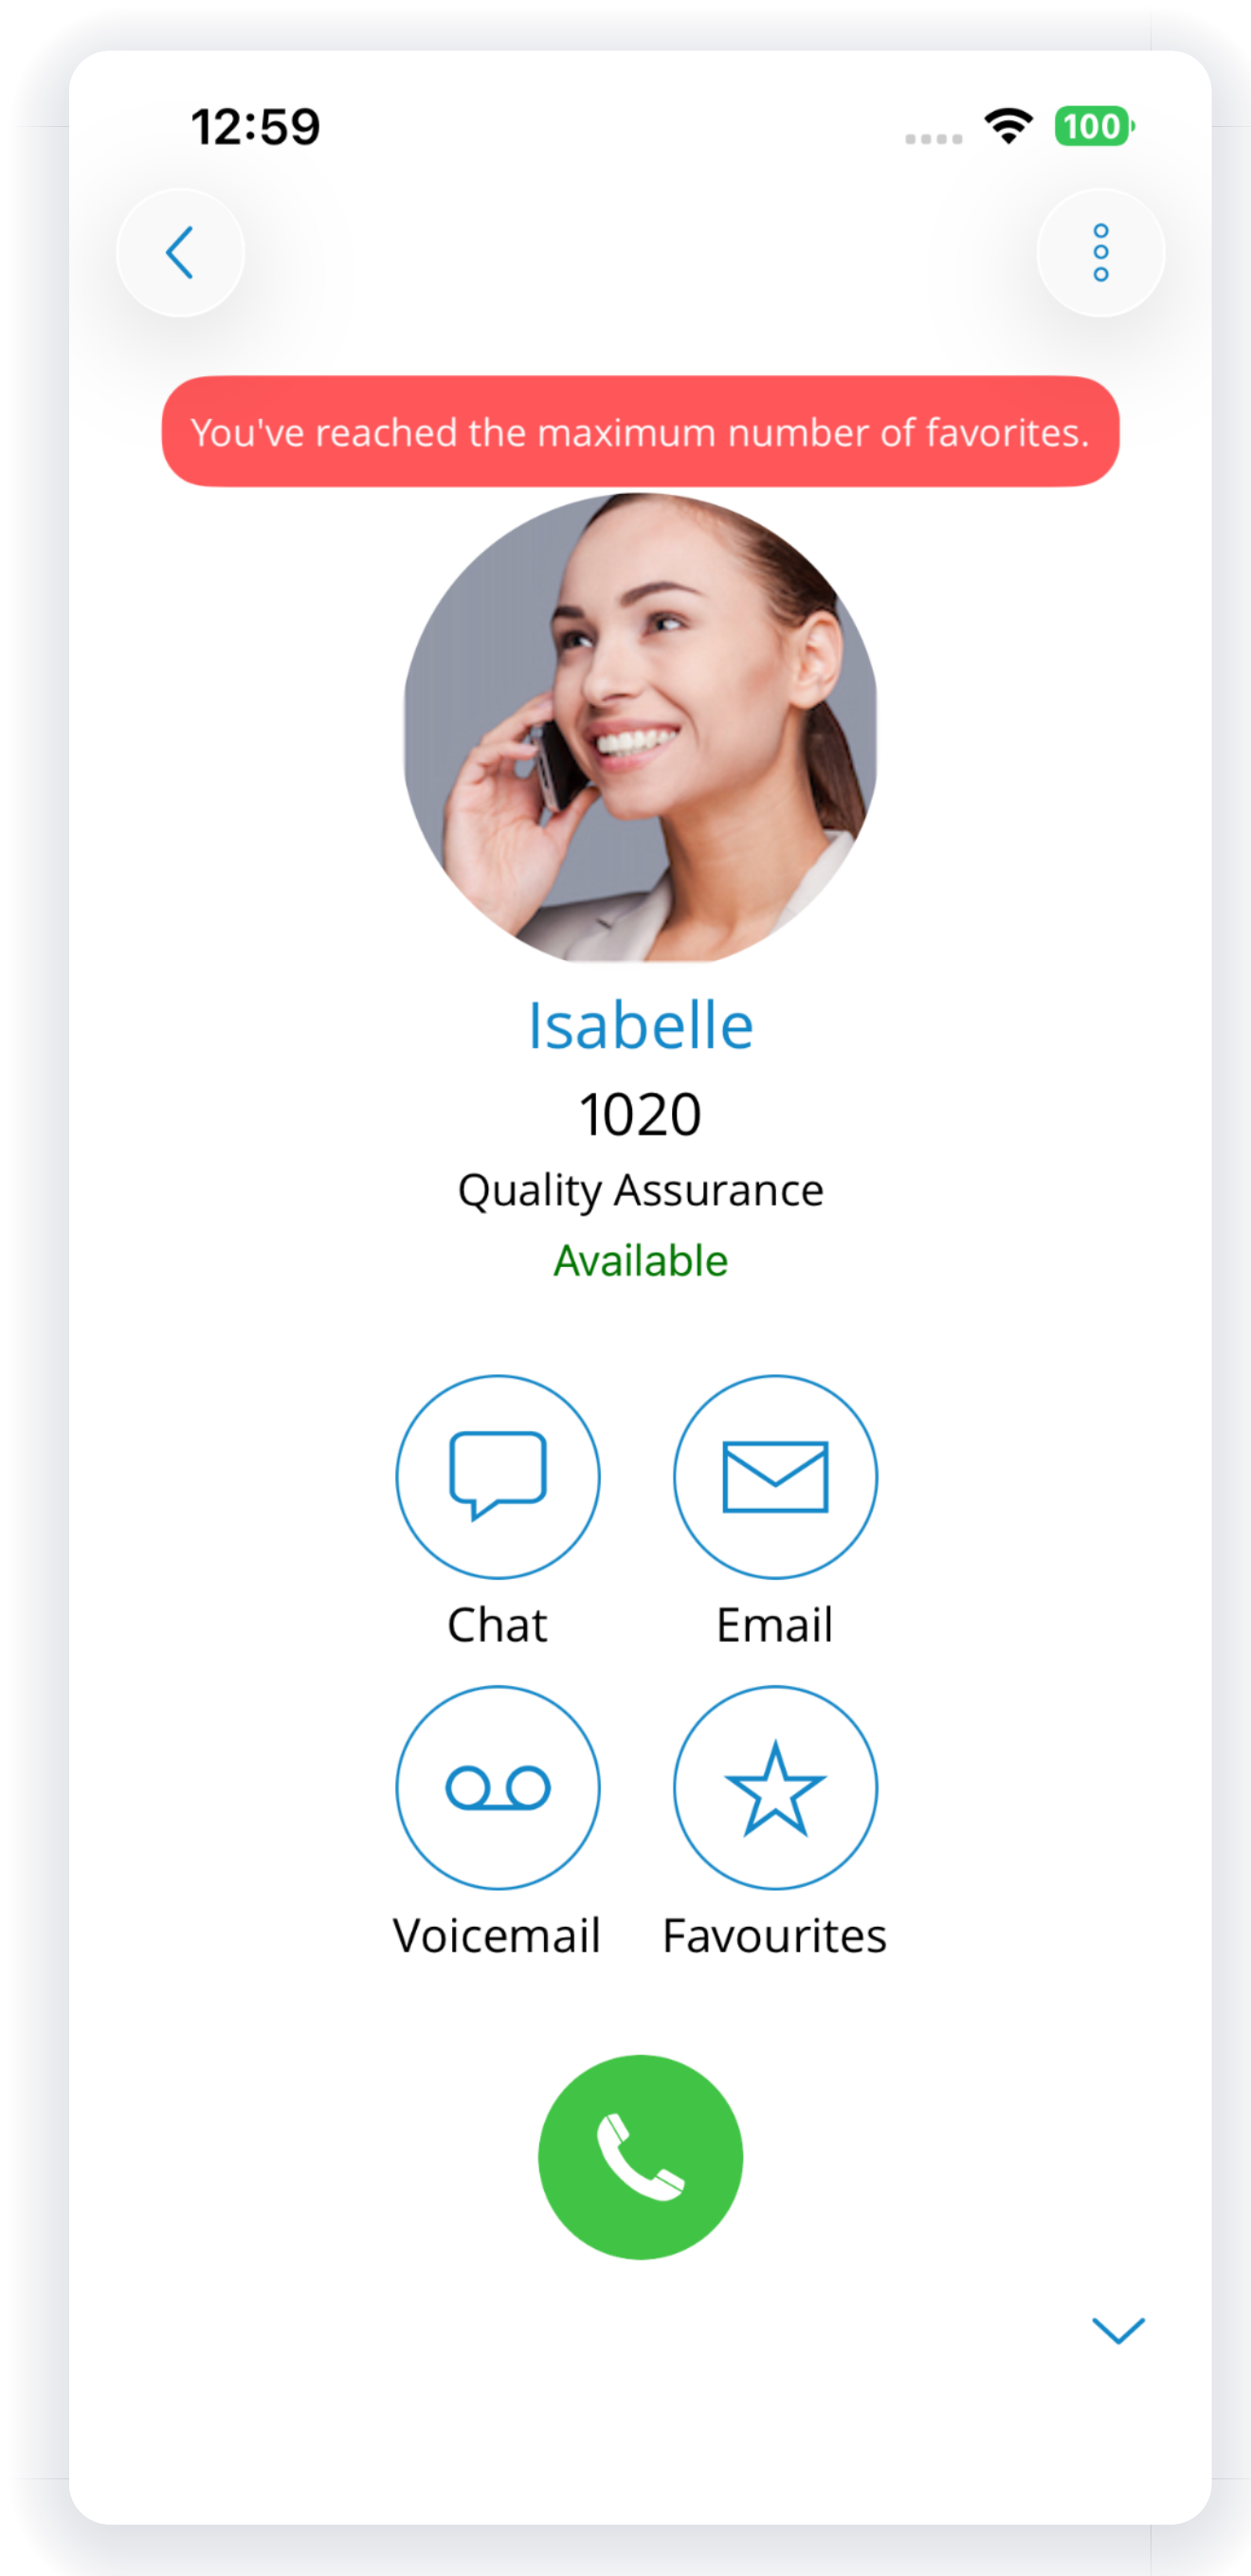

Synced favorites

Managing frequently used contacts is now easier with the improved Favorites feature in gloCOM GO. Users can add contacts to their favorites regardless of the contact source, including internal, external, and contacts stored on their mobile device. All favorite contacts are grouped in the Favorites section of the Contacts, providing a centralized view for quick and convenient access. Favorites are synchronized across all user devices, keeping the Favorites list consistent.

The favorites list supports manual refresh to keep contact information synchronized with the latest changes.

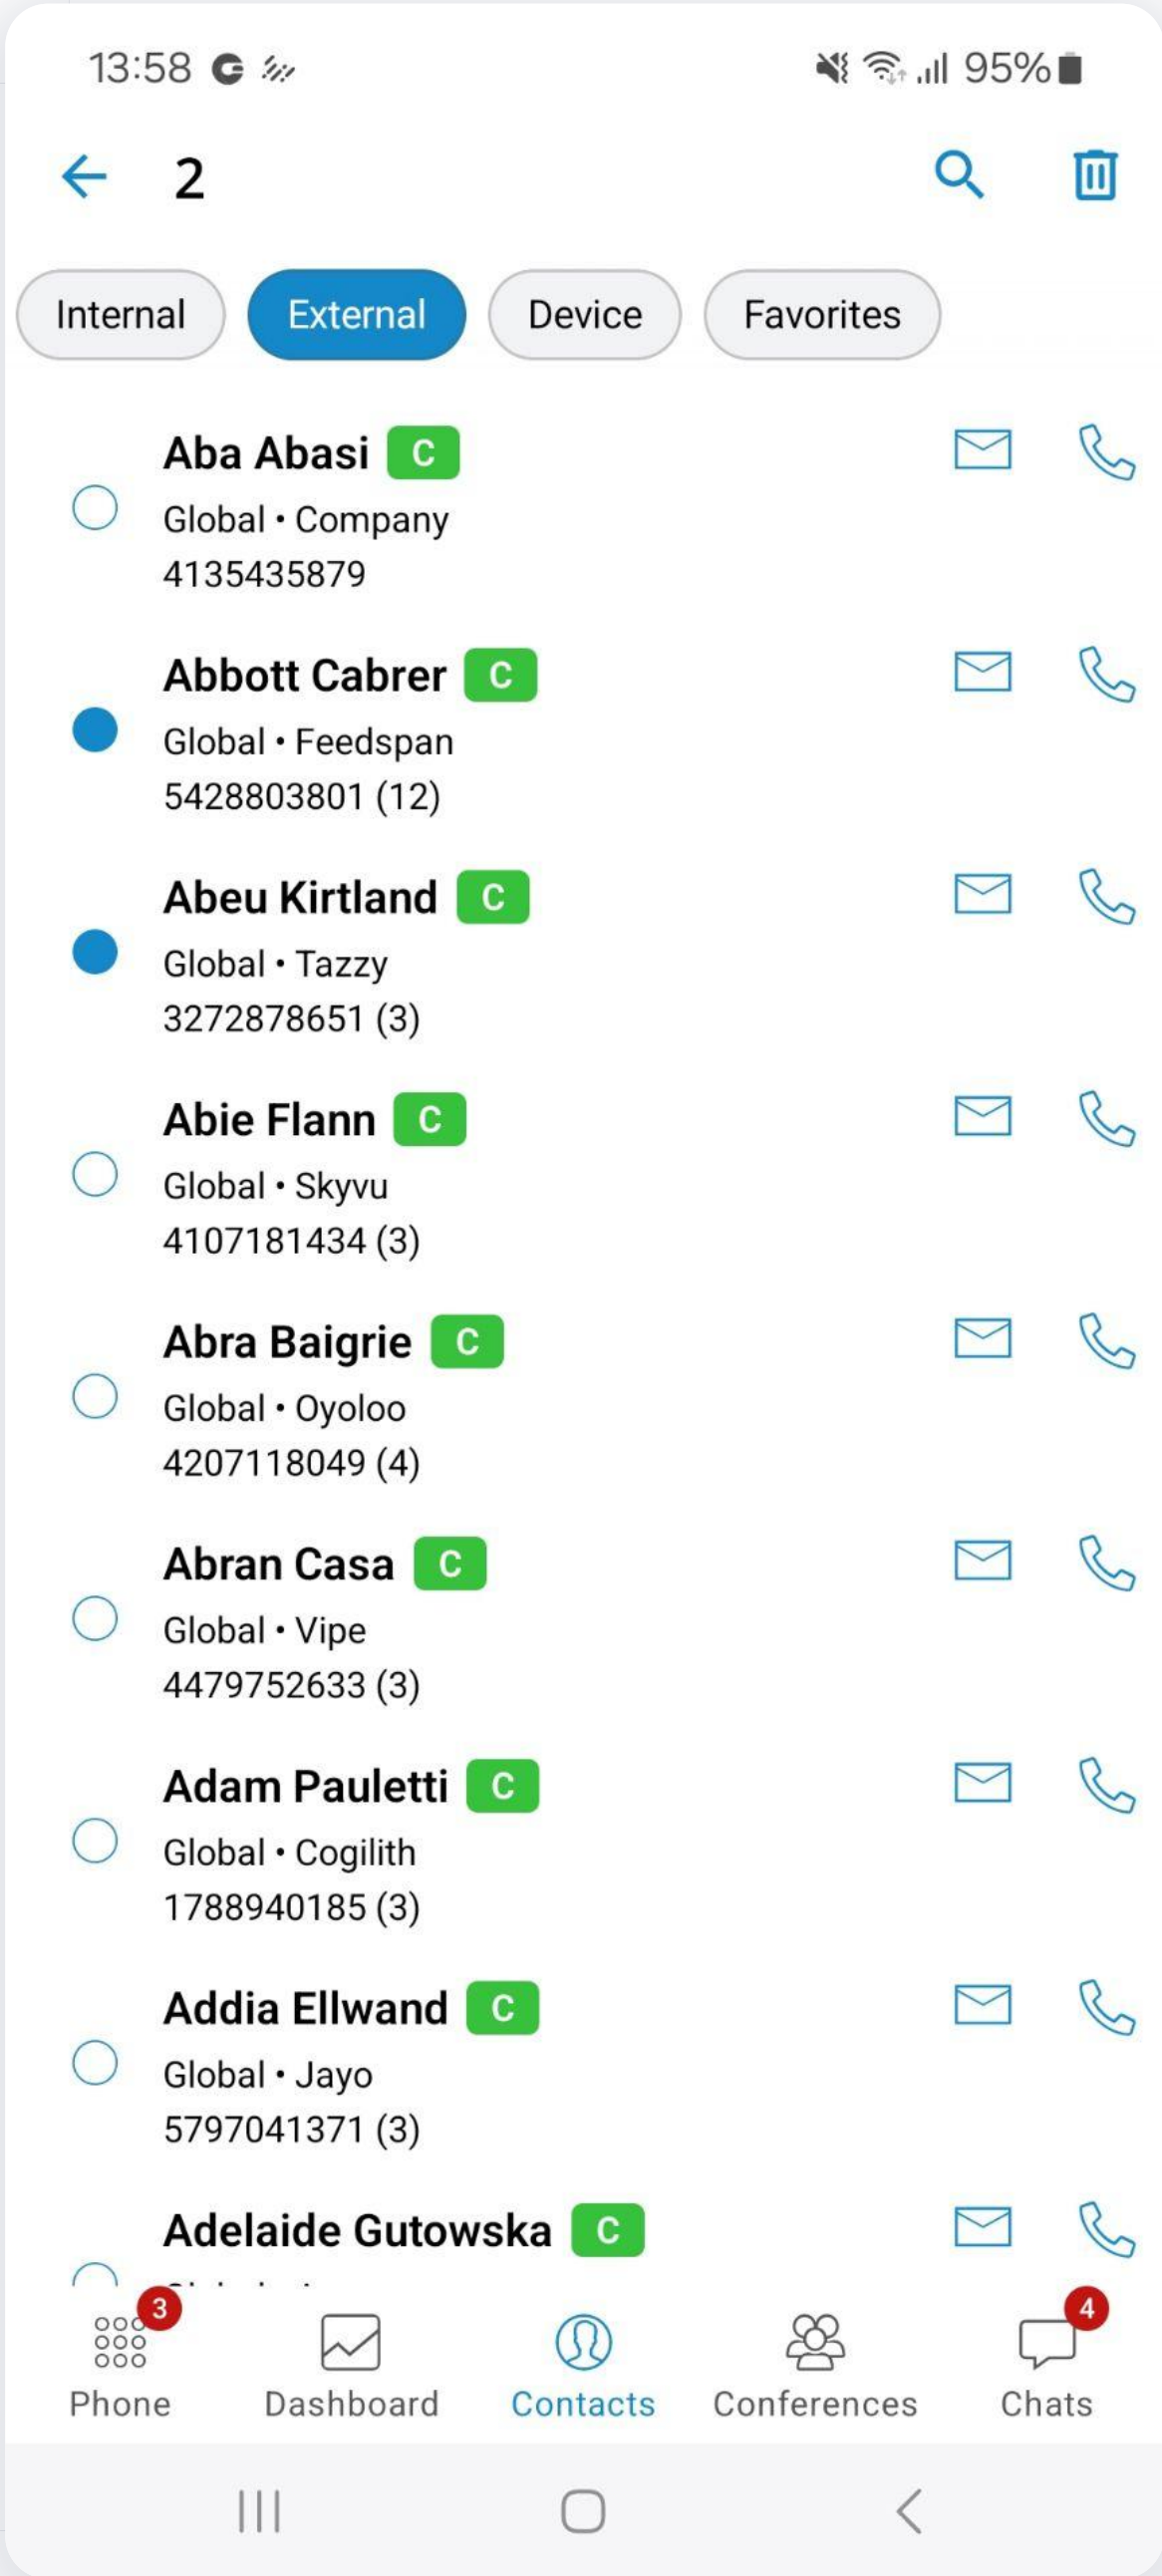

Additionally, the maximum number of favorite contacts is limited to 50. Once this limit is reached, the application will display a notification, allowing users to manage their favorites before adding new contacts.

Delete multiple external contacts

This feature allows users to select and delete multiple external contacts at once. Only users with permission to delete can select and delete contacts.

In selection mode, users can tap the contacts they want to delete. When the user taps Delete, a confirmation alert appears asking them to confirm before the deletion is carried out.
