

PBXware 5.3.7.1 CHANGELOG

5.3.7.1 - October 12, 2020

Bug Fixes & Improvements

- › API: Enabled setting the 'Show in App' field when editing an Extension
- › API: Fixed php errors that happen when a field is not set
- › API: Change the way the 'tprivacies' field is set to 'None'
- › Asterisk: Fixed the Asterisk crash during attended transfer
- › Auto Provisioning: Added support for the Polycom 6.3 firmware
- › Auto Provisioning: Fixed issues when using the Yealink expansion modules EXP40/EXP50
- › CRM Routing: Fixed an issue with the URL when a custom CRM is in use
- › CRM Routing: Fixed an issue where the destination IVR greeting would not play
- › DID: Fixed an issue when the user would not be able to see the advanced options
- › DIDs: Fixed an issue with SIP INVITE that would happen when a destination is Multi user and recording is enabled on DID
- › Extensions: Fixed an issue where the service plan date would not be stored properly into the database
- › Extensions: Fixed an issue where a fatal error would occur while saving an Extension if the language was not set to English
- › Fixed an issue where the BLF options were fetched from an Extension on another Tenant
- › Hot Desking: Fixed the TLS issues when logging in
- › OSC: Fixed an error with the Operation Times page after saving
- › Settings: Voicemail fields are now not required
- › SuiteCRM: Fixed an issue with endpoints and call recording not working
- › Trunks: Fixed an issue that would happen occasionally while reading additional headers
- › Voicemail: Fixed an issue where the wrong transcription would be sent

Added support for Snom endpoints
