

PBXware 6.0.2 CHANGELOG

New Features

- › Custom Code Detection: User is notified when custom code is detected on the system. The notification is shown on the Versions page in the About page and in the Updates page in the Setup Wizard

Bug Fixes & Improvements

- › IVR: Solved an issue where “Please select” dialog was shown two times on greeting
- › Trunks: Solved an issue where incoming IPs would be improperly added to pjsip.conf
- › Ring Groups: Added an option to set Call Rating Extension for Ring Groups. Setting it will use that extension to bill calls made from the Ring Group to the final destination
- › Touchless Provisioning: Allowed setting HTTPS as the provisioning protocol
- › Touchless Provisioning: Fixed Touchless Provisioning when custom config is in use
- › Extensions: Enable setting Area Code field to a value of more than five digits
- › Enable PSTN numbering mode change status from Not Set to Yes/No
- › Settings: Changed name for dialer licence on “About” page to be whitelabel compatible
- › Ring Groups: Fixed a bug where the default confirmation message would play, even though a custom one was set
- › Conferences: Fix a bug where a conference would have 1 additional channel counted towards the limit
- › Archive Storage: Optimize storage load by optimizing the execution of database queries
- › Meeting: Fixed a bug that caused participants to not be able to invite others into meeting, limiting the invite to the organizer only
- › Meeting: Fixed a bug where participants added into an already existing recurring meeting weren't able to join said meeting

- › Meeting: When forming meeting email for invite to recurring meeting, use the date for the next planned meeting, and not when the meeting was first created

Added support for Yealink T4xU endpoints

T41U

T46U

T48U

Bug Fixes & Improvements

- › Adding Incoming IP addresses on Provider '^O' not escaped
- › API:
 - › Fixed bug where API request for Extension Edit deletes the UAD Auto Provisioning template
 - › Fixed bug where option Disable Tenant Calls isn't working properly and allows setting multiple Pickup/Call Groups when creating an extension
 - › Renamed field 'macaddress' to 'mac' on pbxware.ext.configuration
 - › Updated API docs
- › CRM: Fixed issue where the Enable/Disable button was not working
- › Dialer: Solved issue with statistics not working when translated to French
- › DID: Fixed issue with enabling/disabling field
- › Scheduled reports: Made changes to enable reports to load properly in French
- › Trunks: Fixed issue where setting protocol TCP on trunk would not have any effect
- › Routes: Fixed issue with IVR tree popup appeared on click for import database
- › Updated French translation (.po) files
- › Queues: Restore queue settings option for Multi Tenant Edition
- › Settings: Fixed issue on about page with meeting if concurrent meeting is set to 1
- › IVR: Fixed issue where IVR Tree Graph is not working if French is a selected language
- › Fixed issue where server recording silent option does not apply when recording is not set to yes
- › Emergency call notifications: Skip destinations that are emergency numbers
- › Queue Reports: Handle auto mp3 conversion option
- › Meeting:
 - › Solved issue where presence status would not update when an extension is in a meeting

- › Solved issue where presence status would not update when an extension is in a meeting
- › Solved issue with dial number not appearing on default email template
- › Added “join” section to the meeting template
- › Solved issue with special HTML Characters in meeting name
- › Define hints used for on call status when joining audio via webrtc
- › Solved issue with html characters ending up in mail for meeting

Added support for new Grandstream endpoints
