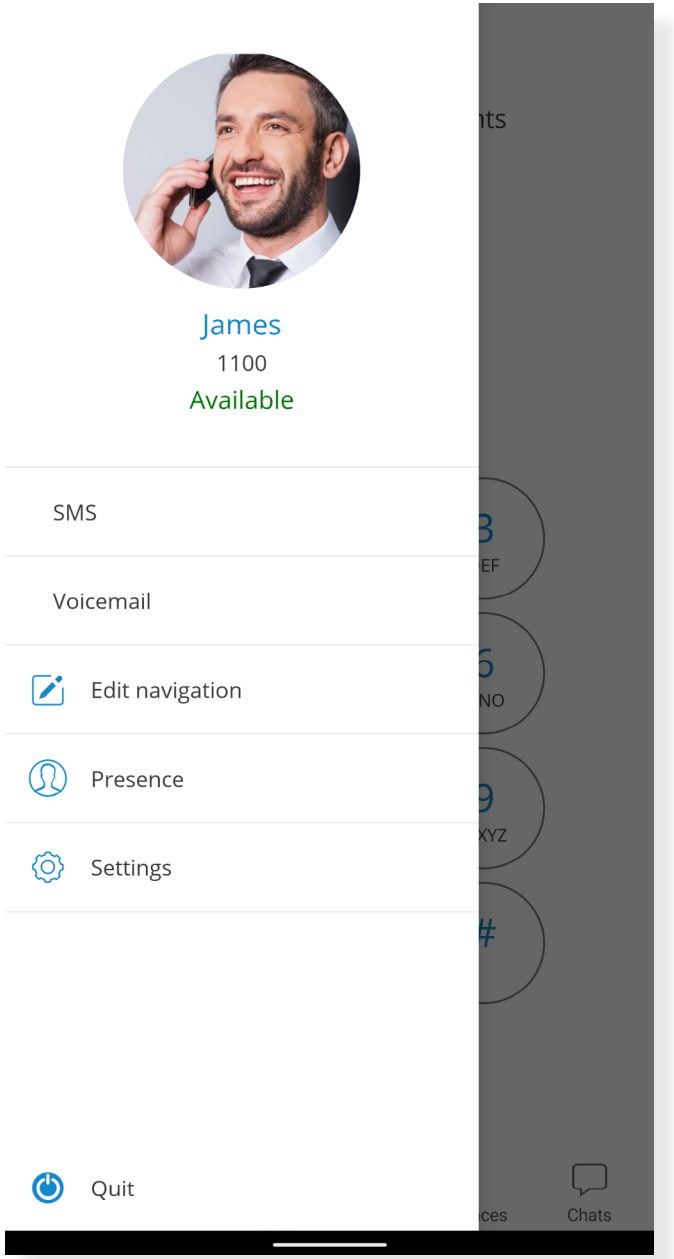
FEATURES

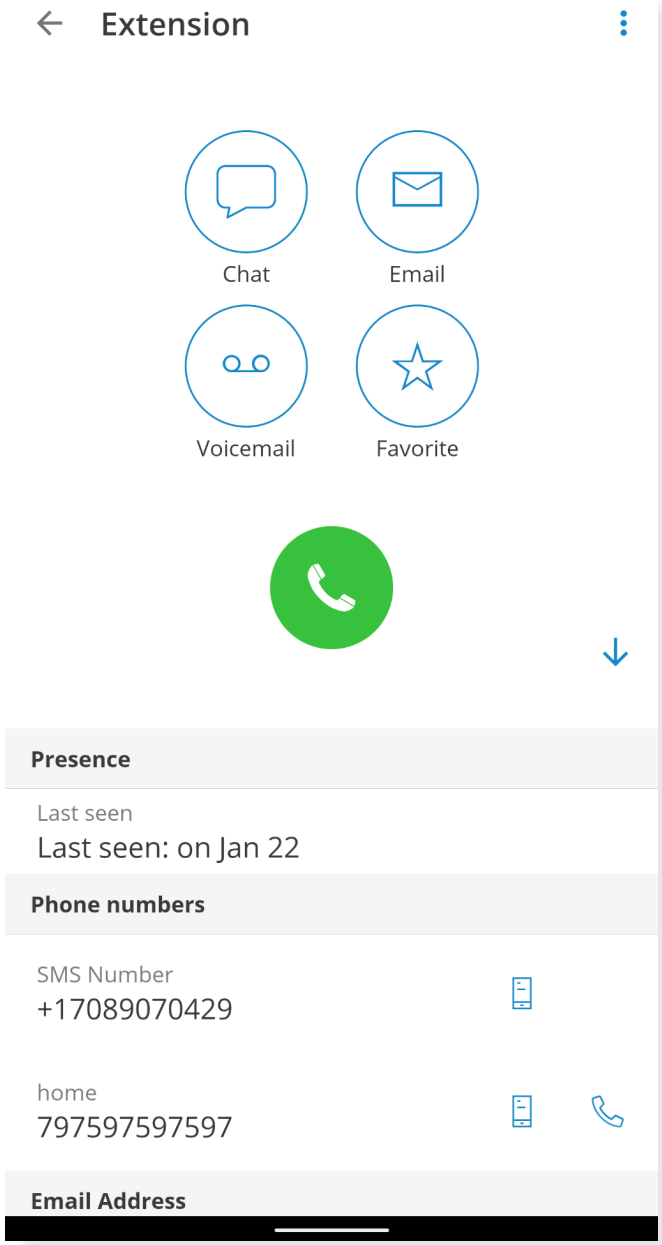
In our effort to facilitate users' needs, the new **Communicator GO 6.3.0** brings another new feature - **SMS**. This allows users to send and receive SMS messages.

The SMS feature can only be used if an SMS number is associated with the Extension in PBXware. *Please note that if the SMS number is not set, users will not be able to use this feature.*

Users can start an SMS conversation in two ways:

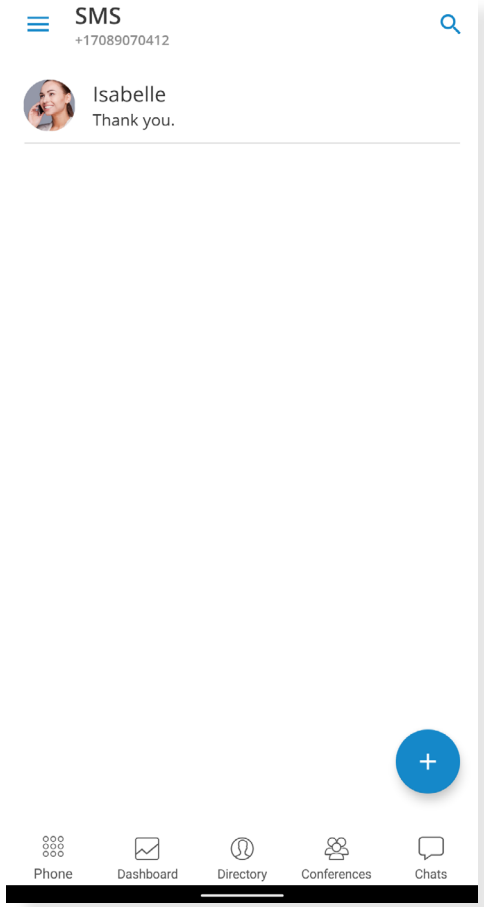
- By clicking the 'SMS' icon on the 'Menu' toolbar

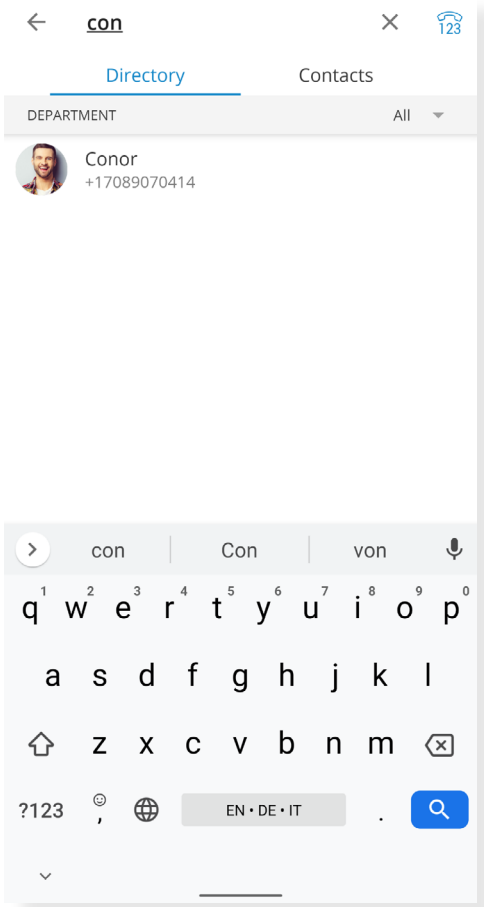




- From the Extension screen by selecting the recipient's number

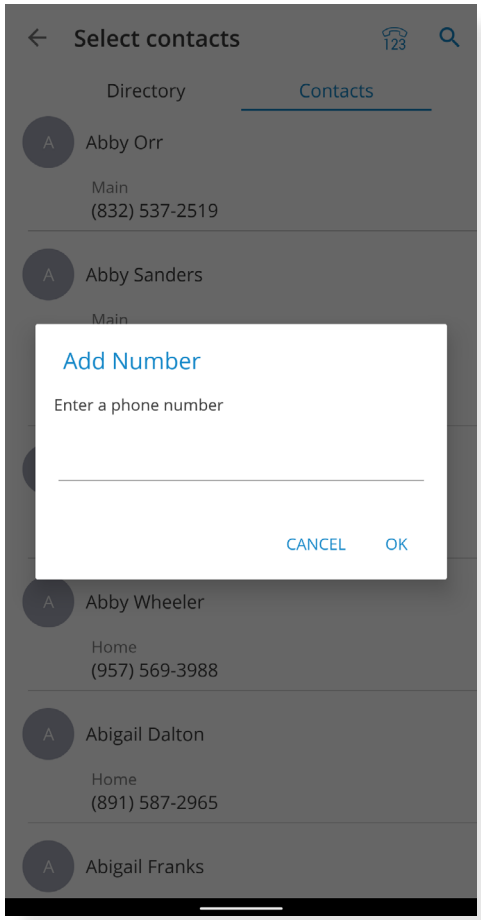
When a user enters SMS, s(he) can easily start a conversation by pressing the '+' (plus) sign located at the bottom right of the screen. A user can then select recipients from Directory, the device's Contacts, or enter a phone number manually for numbers not stored in Contacts.

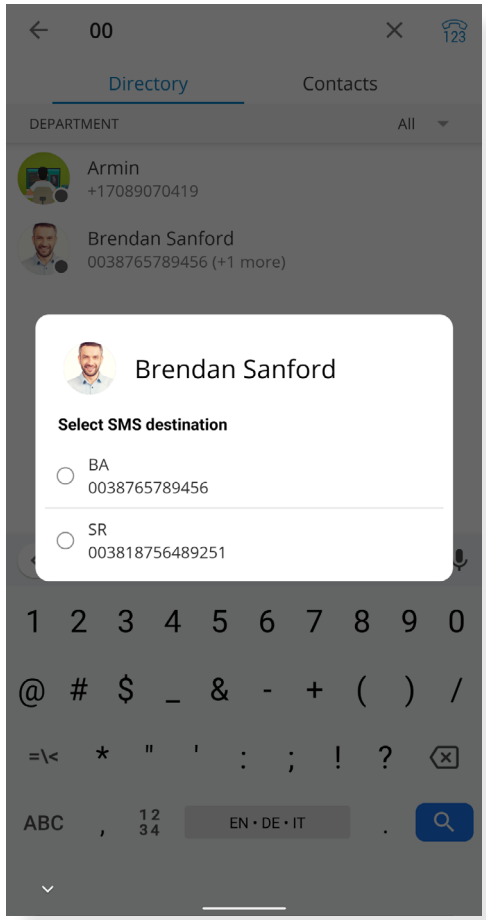




More Than One Number Displayed

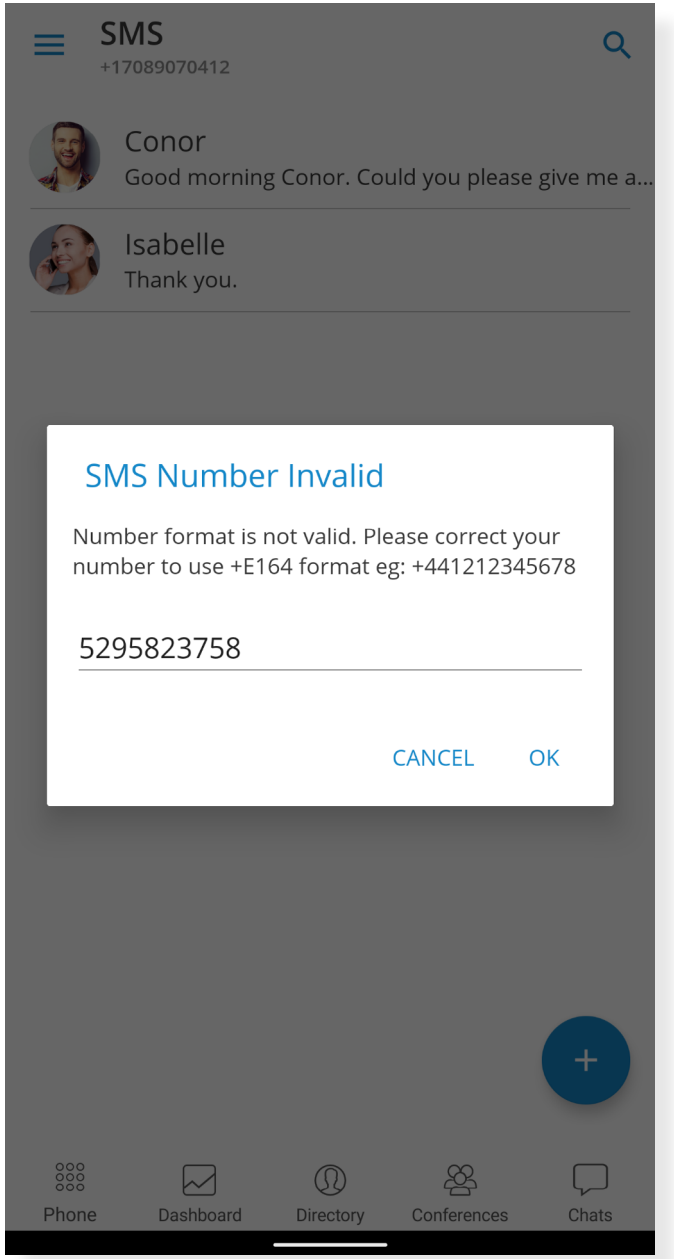
If a contact has more than one number displayed in his/her mobile list, the pop-up window will appear, after which users will be able to select to which number they want to send an SMS.

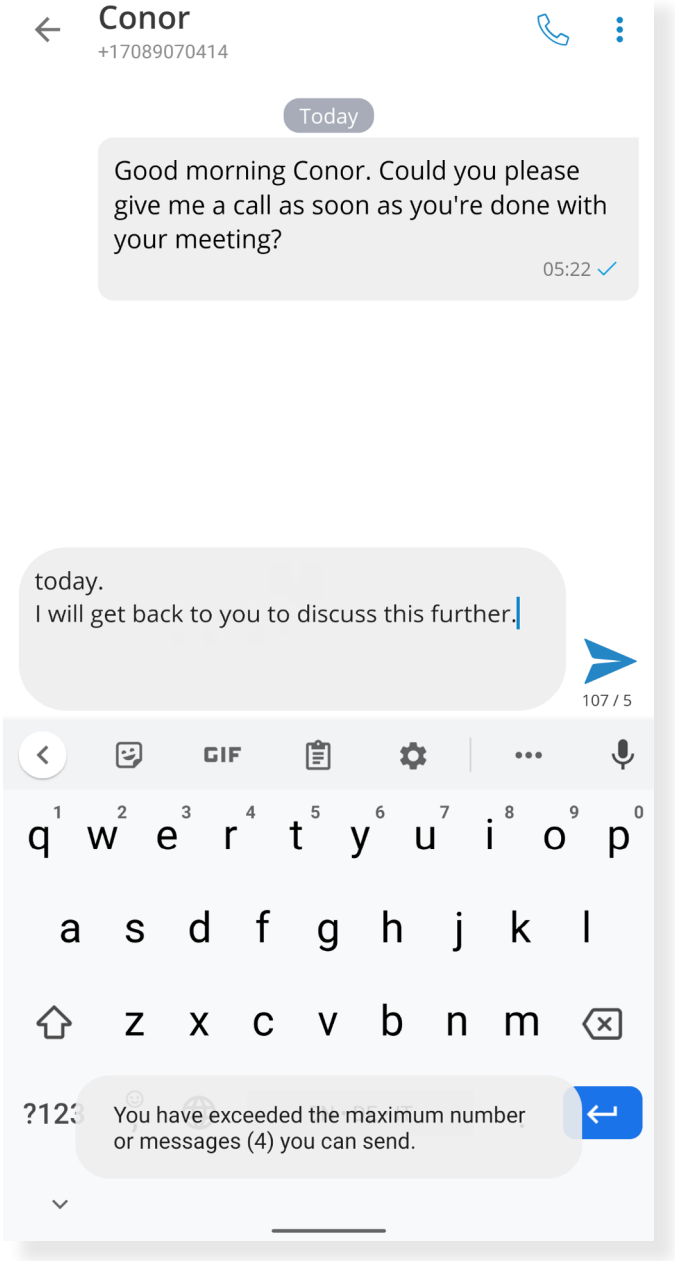




Numbering Format - E.164

The SMS number must be in the E.164 format or a local number relative to the PBX. Otherwise, users will not be able to create an SMS conversation.





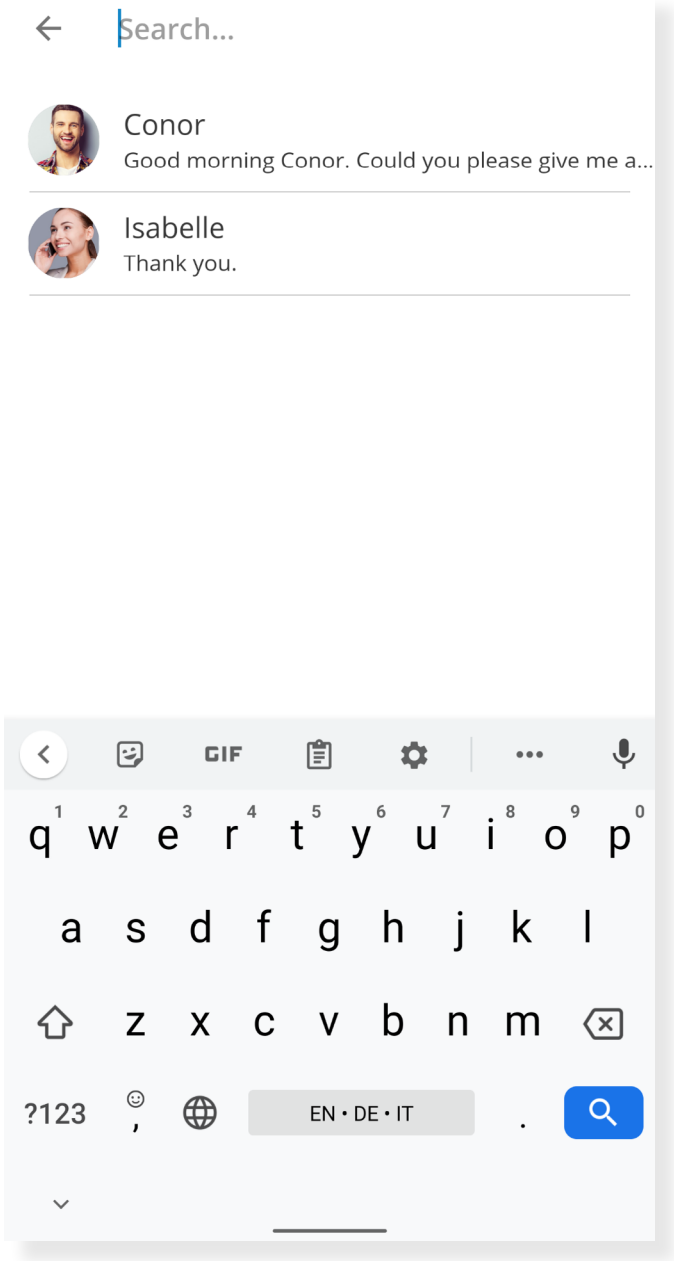
Maximum Number of Messages

The maximum number of messages to be sent at once is four. Users will be notified by a pop-up message if they exceed this number and whether they can send a message again.

The SMS counter is located next to the ‘Send’ icon.

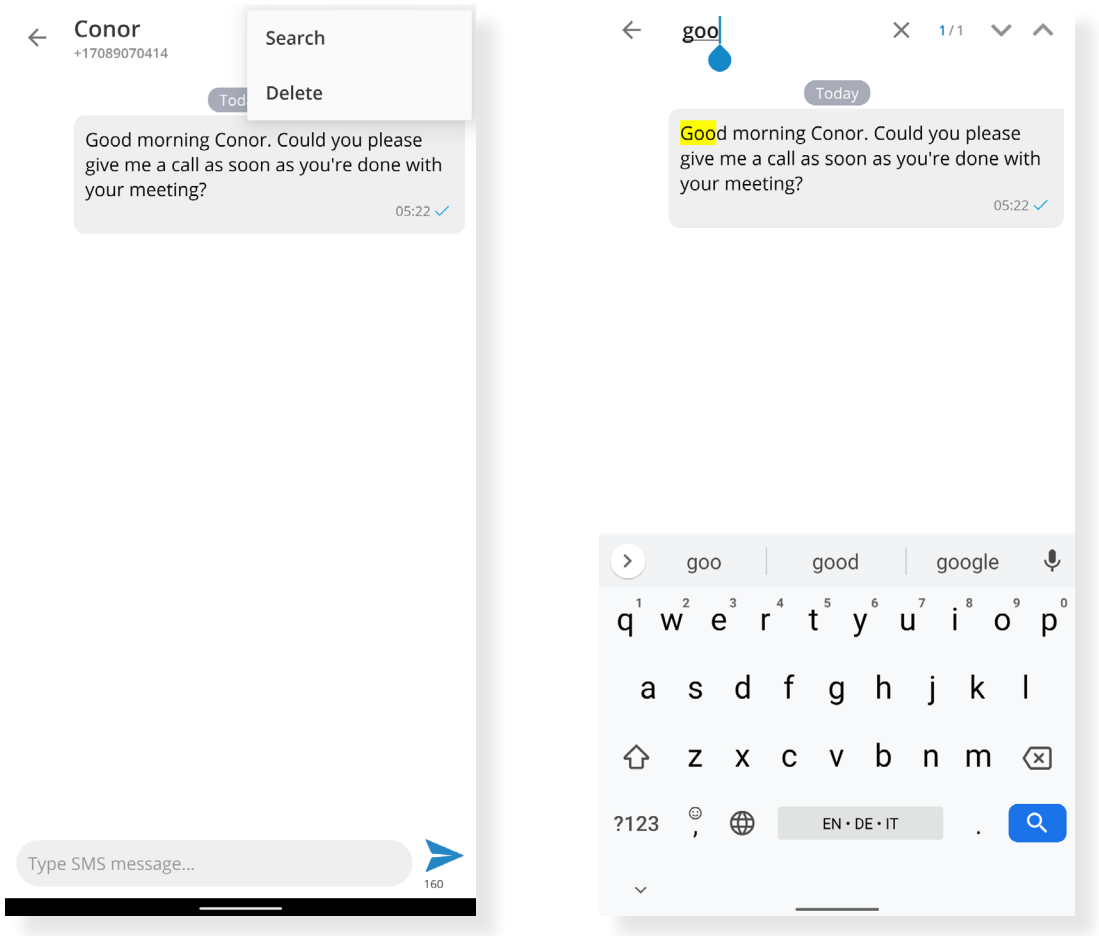
Search Existing SMS Conversations

The search bar in the **SMS** feature allows users to search messages by name or phone number.



Full-Text Search Inside an SMS Conversation

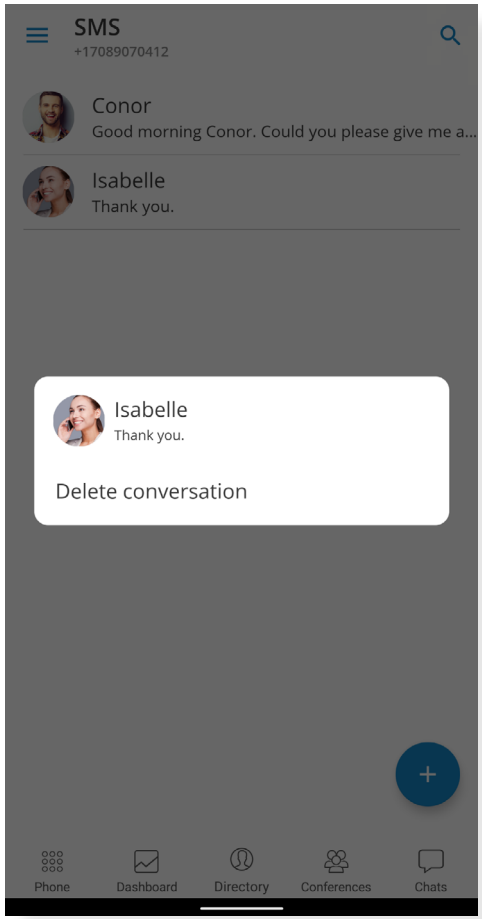
A full-text search can be performed by entering an existing SMS conversation and clicking the ‘Search’ icon in the upper right corner of the screen.

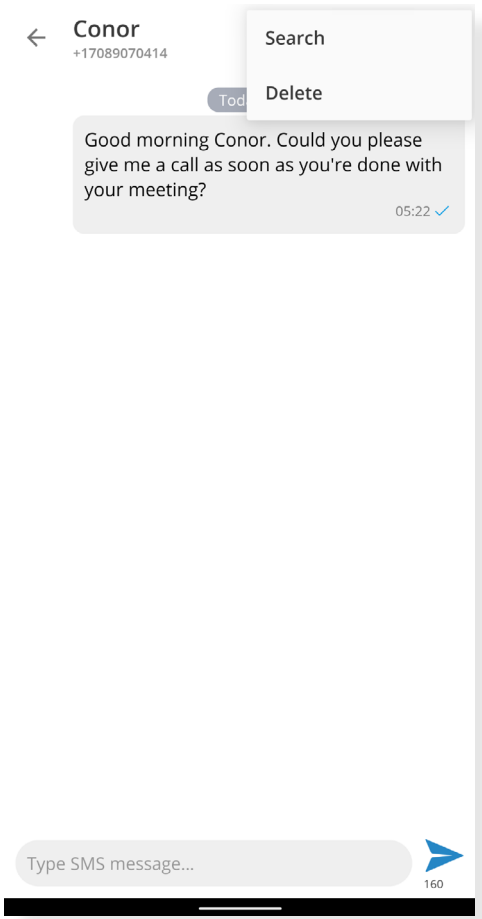


Delete SMS Conversations

Users can delete existing SMS conversations directly in one of the following ways:

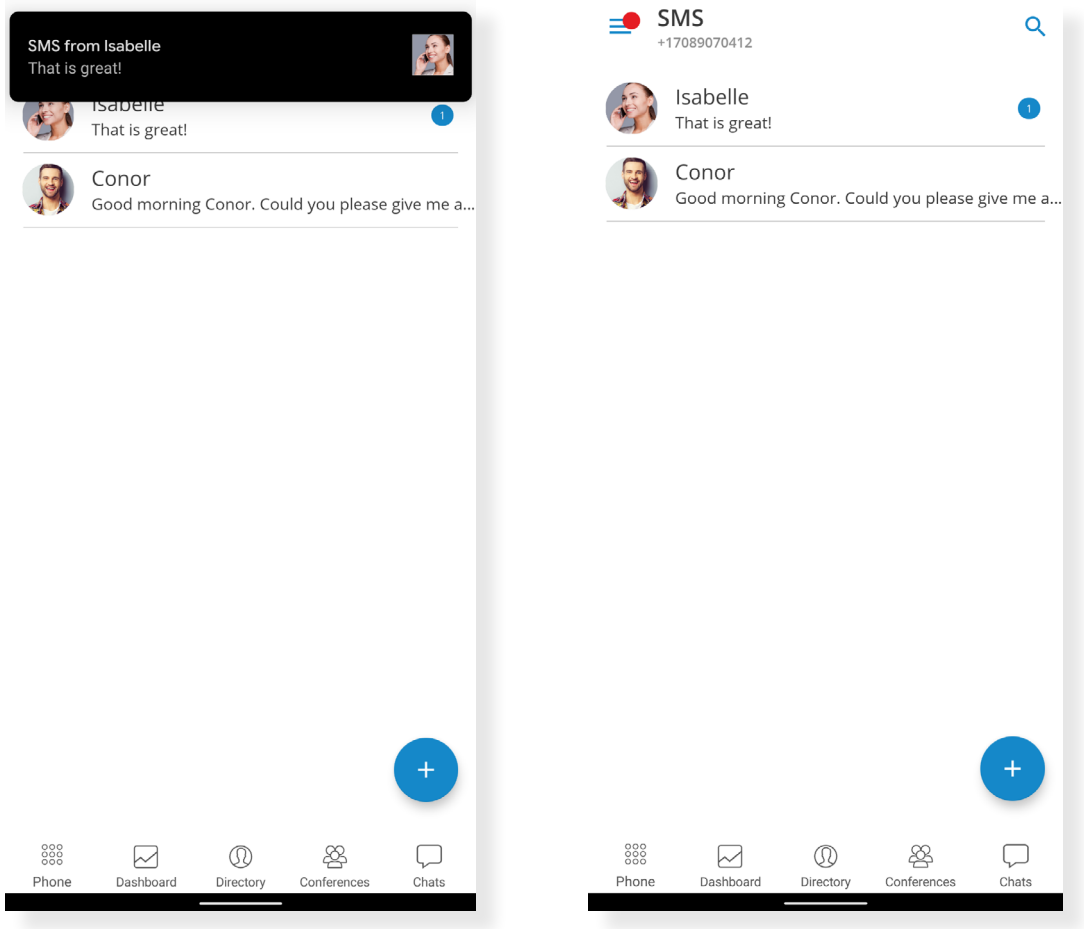
- By pressing and holding on the conversation.
- By selecting the ‘Delete’ icon from the upper right corner when inside the conversation.





Receiving SMS

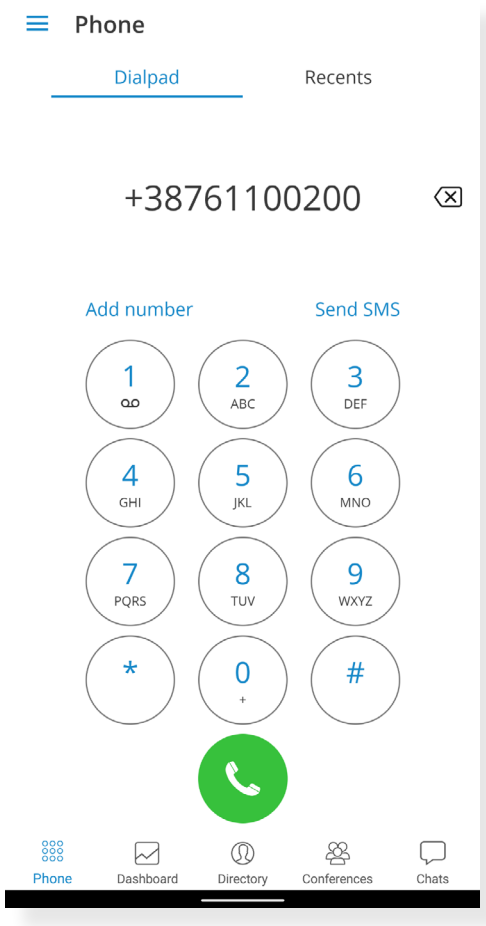
When a user receives an SMS message, they will get a pop-up notification. If the user is offline, the pop-up notification will appear after the sync is completed on his/her next login.

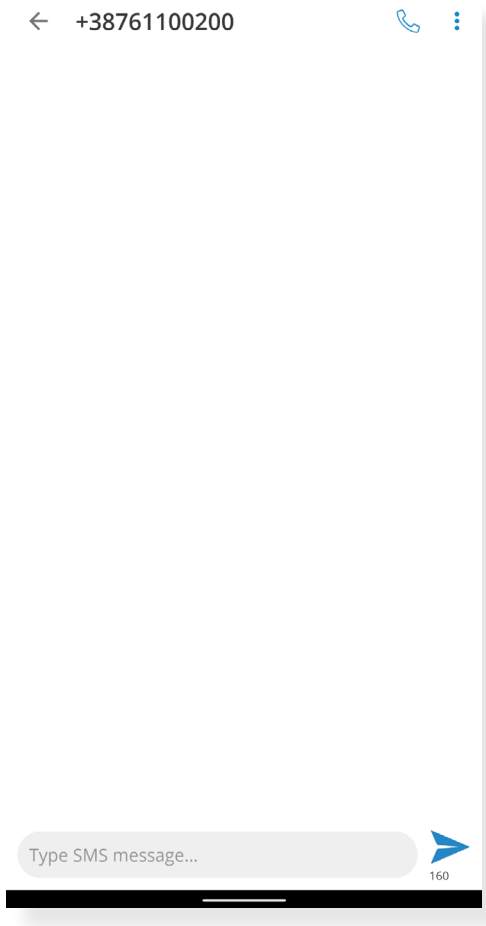


SMS notifications will be visible on the ‘SMS’ icon in the main menu displaying the number of unread messages.

Send SMS Directly From Dialer

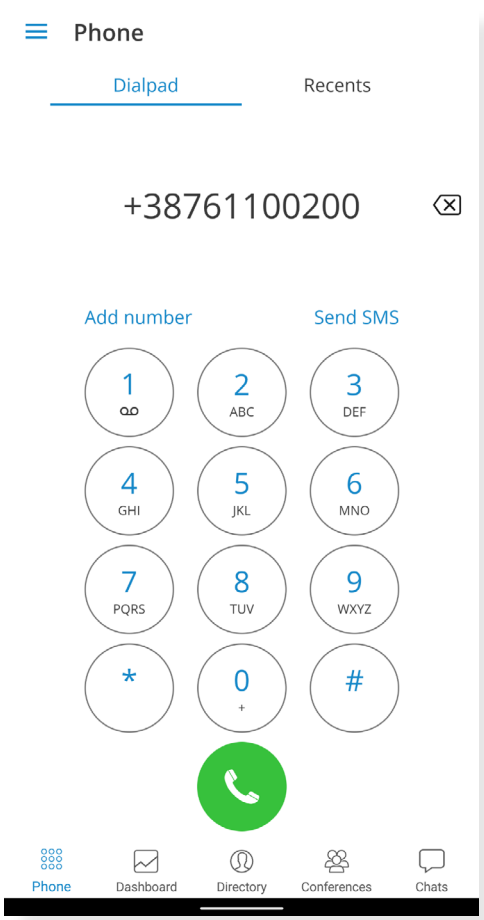
When entering a phone number on Dialer, our new ‘Send SMS’ feature will appear. Clicking it will enable a user to send an SMS to that number directly from the Dialer.

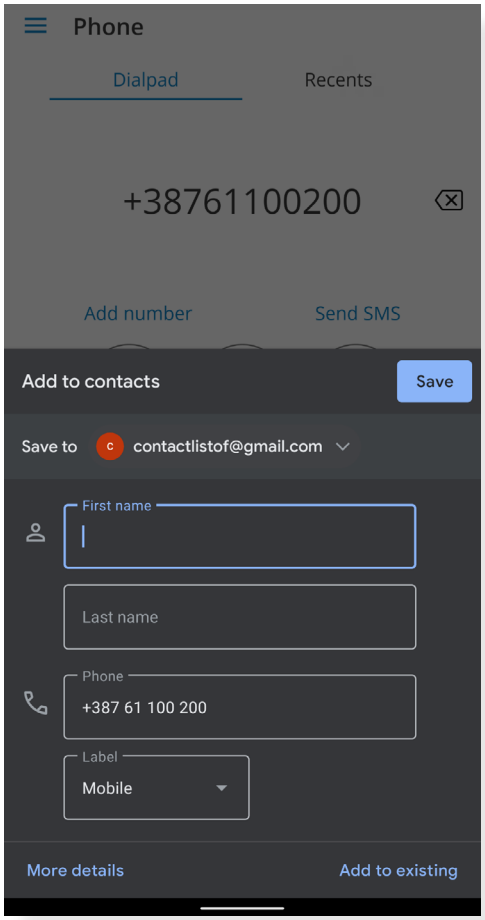




Add a Number to Phone Contacts From Dialer

When entering a new number in Dialer, the new ‘Add Number’ feature will appear. Clicking it will enable a user to add that number to their Contacts.





Enable SIP Over the Mobile Network By Default

With Communicator GO 6.3.0, this feature will be enabled by default after the installation.

Long-Press Icon for One Time Callback Activation

Single Call back can now be started by pressing and holding the ‘Call’ icon from any place on the interface where this icon can be found.

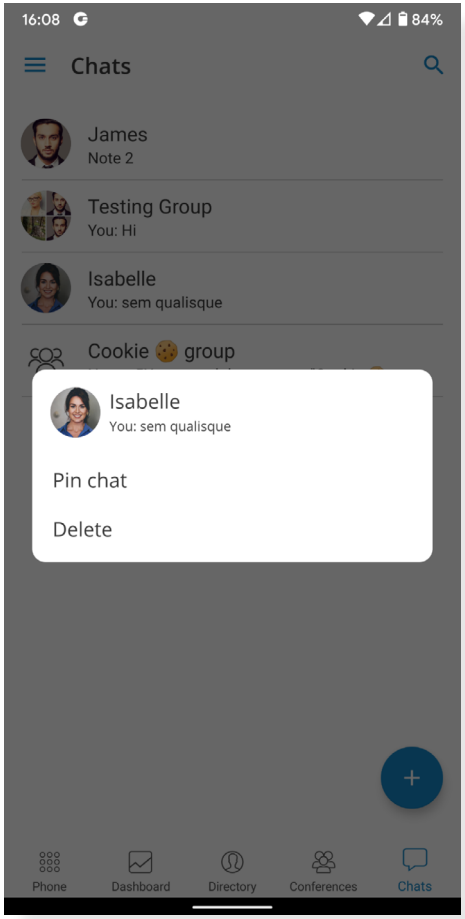
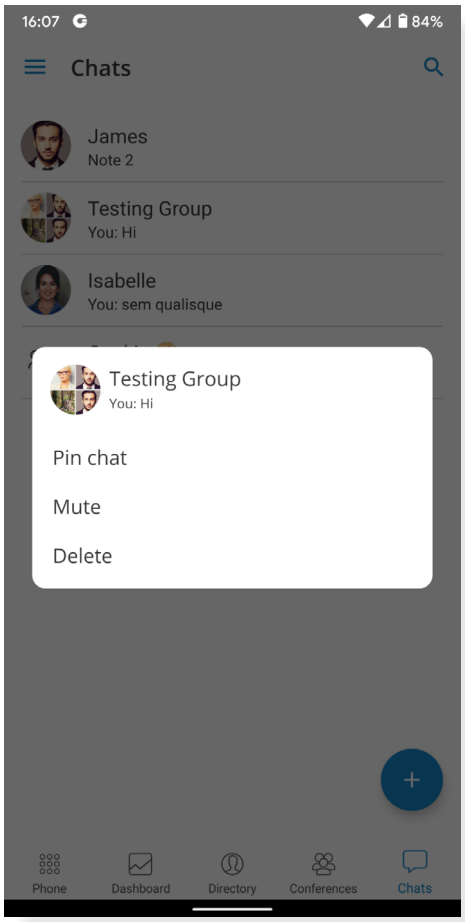
Mute and Delete Quick Actions on Chats List

In order to facilitate the use of chat, we have added more features: ‘Delete’ and ‘Mute’. If a user long presses a specific chat, these new features will be displayed.





Ability to Send a Message to Oneself

Our new feature enables a user to send a message from chat to himself/herself in case s(he) wishes to keep some notes or transfer a certain message between the mobile/desktop app.

Biometric Authentication

Our users now have the option to unlock Communicator GO using Biometric Authentication as an additional layer of security when using the app.

Users can enable it by using fingerprint and face recognition. In order for these options to function, this feature must be enabled in the device and application options.

Callback
Phone Callback is PBXware feature which enables system user to call some destinations without being charged for it. Essentially, the user calls a number which is configured as a DID on the system. The system than hangs up and calls the user back, prompting for the destination to be called.
