RELEASE NOTES

Communicator Meeting GO 7.1.0 Android

Table of Contents

Features **1**

Avatars 1

Translation 1

Pre-expiry notification 2

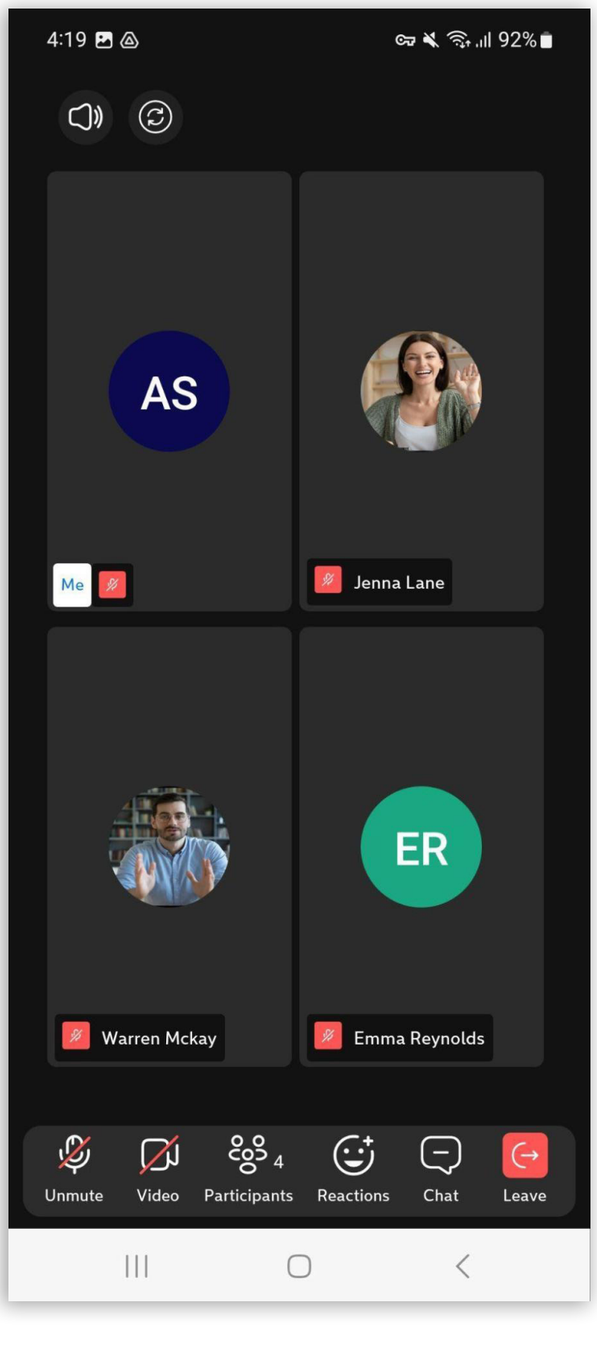
Bug Fixes & Improvements: **3**

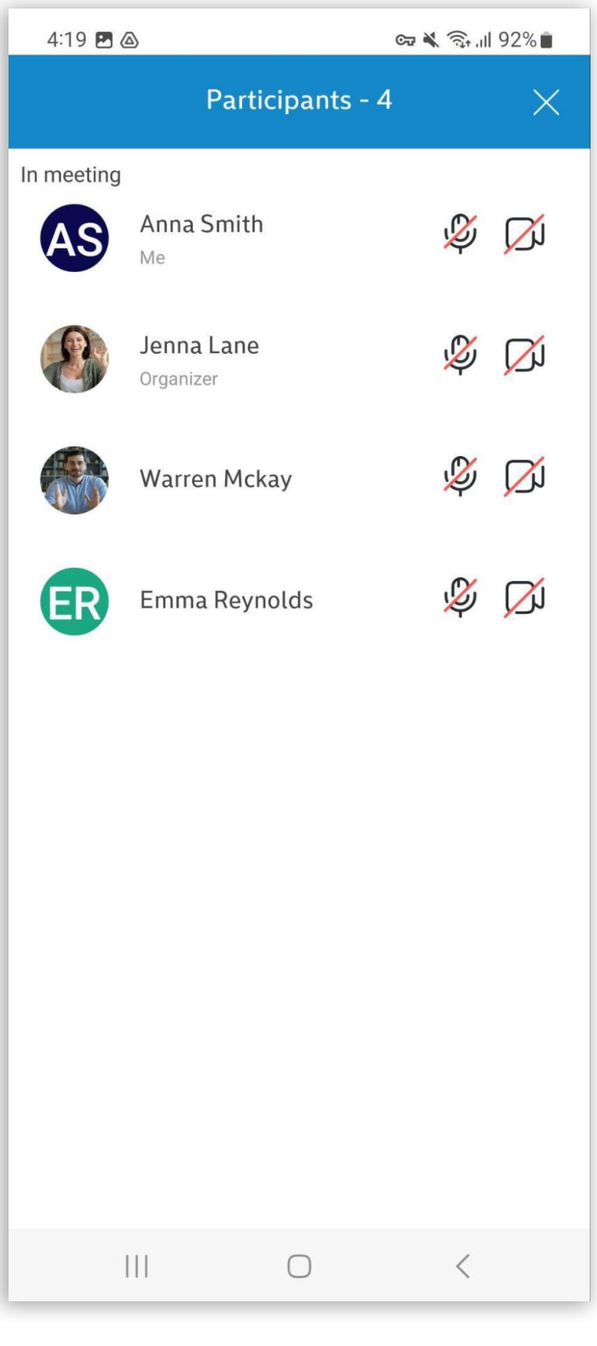
Features

Avatars

This feature allows users on a mobile app to see desktop meeting participants' avatars for video backgrounds when the video is disabled instead of the video disabled icon. Avatars will be displayed on the meeting screen and in the participant list.

For external participants avatars will show initials.





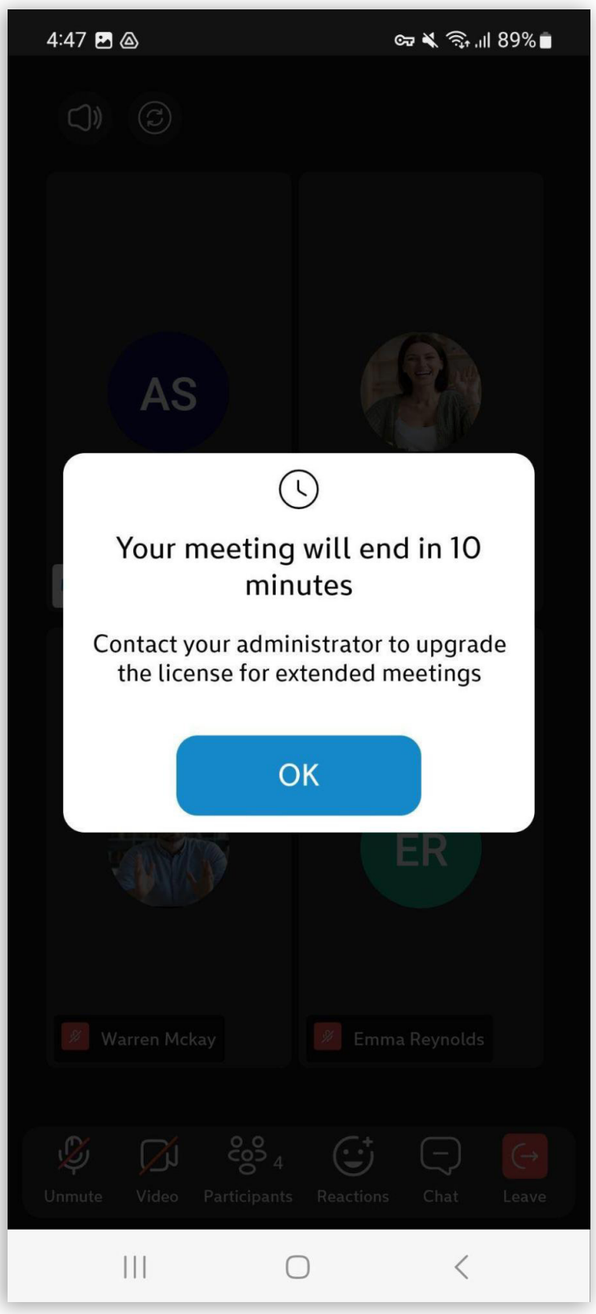
Translation

The translation feature allows users to choose their preferred application language. The following languages are supported: English (US), French, Italian, Portuguese (Brazilian), German and Spanish.

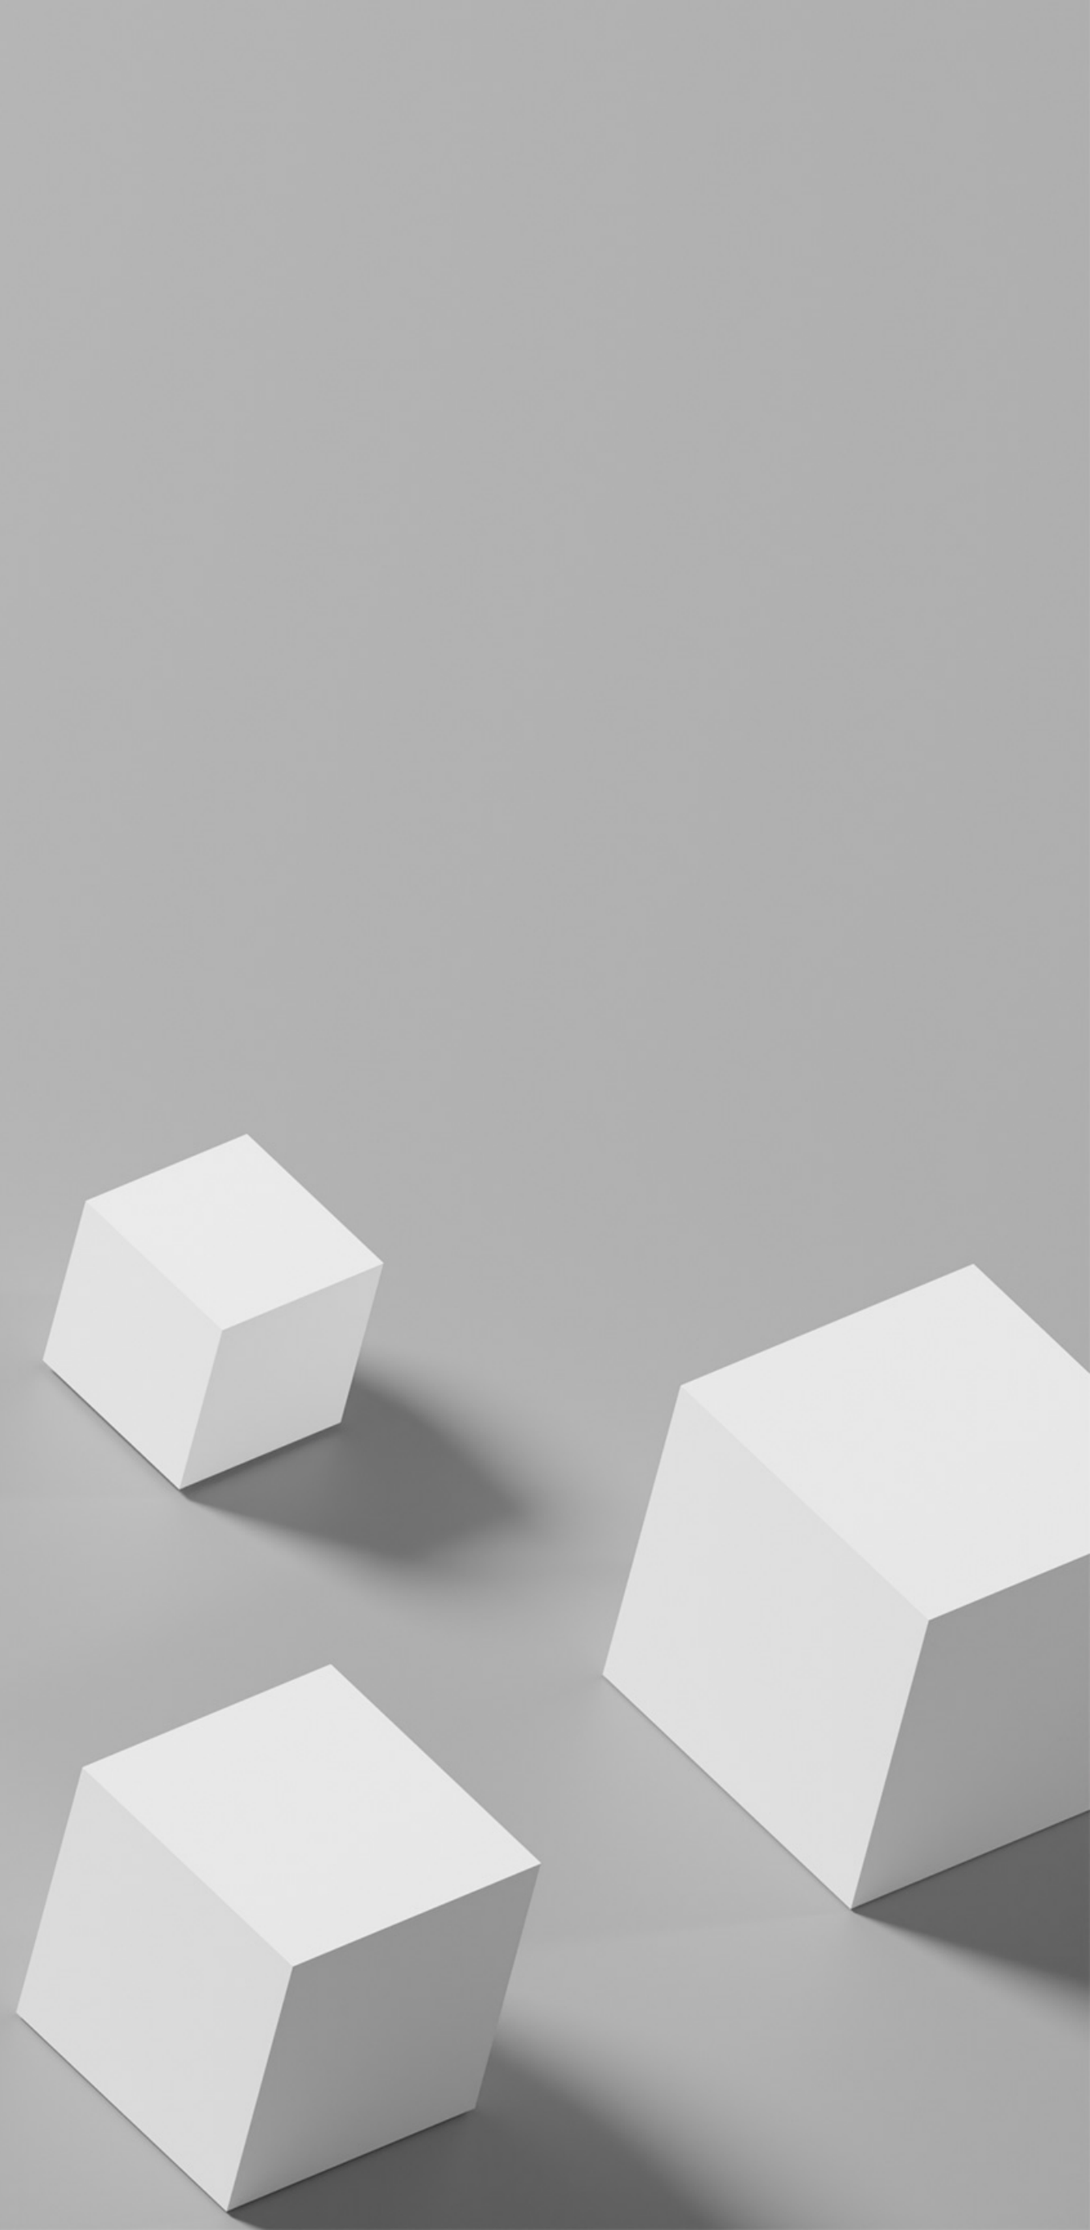
To change the language on the mobile app, the user should first close the app, then change the language in the main phone settings (Settings - General management - Language), and reopen the mobile app. When a new language is added, all buttons, pop-up messages, etc in the meeting mobile app will be translated.

Pre-expiry notification

Pre-expiry notification is a feature designed to automatically send a notification to all meeting participants ten minutes before the end of the maximum meeting duration based on the type of license/package. This notification serves as a gentle reminder that the meeting is approaching its conclusion. If the message is not closed, it will automatically count down the time until the end of the meeting. Also, if someone else joins the meeting less than ten minutes before the end, they will get a message with the exact time remaining for that meeting.



Note: This message appears only on the Meeting screen!

Bug Fixes & Improvements:


- Removed workspaces from the mobile app project.
- Changed font to Sentral.
- React Native 0.72.5 version.
- Upgraded target SDK to 33.
- Added support for web format.
- Unhandled promise rejections for V-card.
- Fixed an issue with setting audio device.
- Fixed an issue where Switching between phone and speaker was not translated.
- Fixed an issue where the Screensharing label for the speaker was not ok.
