SYSTEMS

gloCOM Call Center Agent

The Call Center Agent edition of gloCOM is a desktop Call Center Unified Communications application dedicated to boosting Call Center Agents' day-to-day efficiency. Together with Office, Business and Call Center Supervisor editions it provides advanced Unified Communications capabilities with all the communication tools needed to drastically increase the productivity of your Call Center or Contact Center.

It provides an agent-optimized interface with features that will make their day a lot easier and more productive. See the status of other agents (phone and presence), send them messages or call them. See the status of queues, calls waiting, agents busy, agents idle etc...

Agent panel

With the agent panel, the agent can see if they are needed in another queue or if it's a good time to take their break based on call volumes.

Manage connections

Through the gloCOM interface, you can make calls with a single click, monitor other agents' status and much more to manage your connections.

Collaborate

Designed to enable fast & simple utilization of Calls, Conferencing, Instant Messaging, Faxing, Online Presence, Call Center functionalities, Outlook/MS Exchange Directory, CRM integration and so much more from a desktop or mobile device.

Organize data

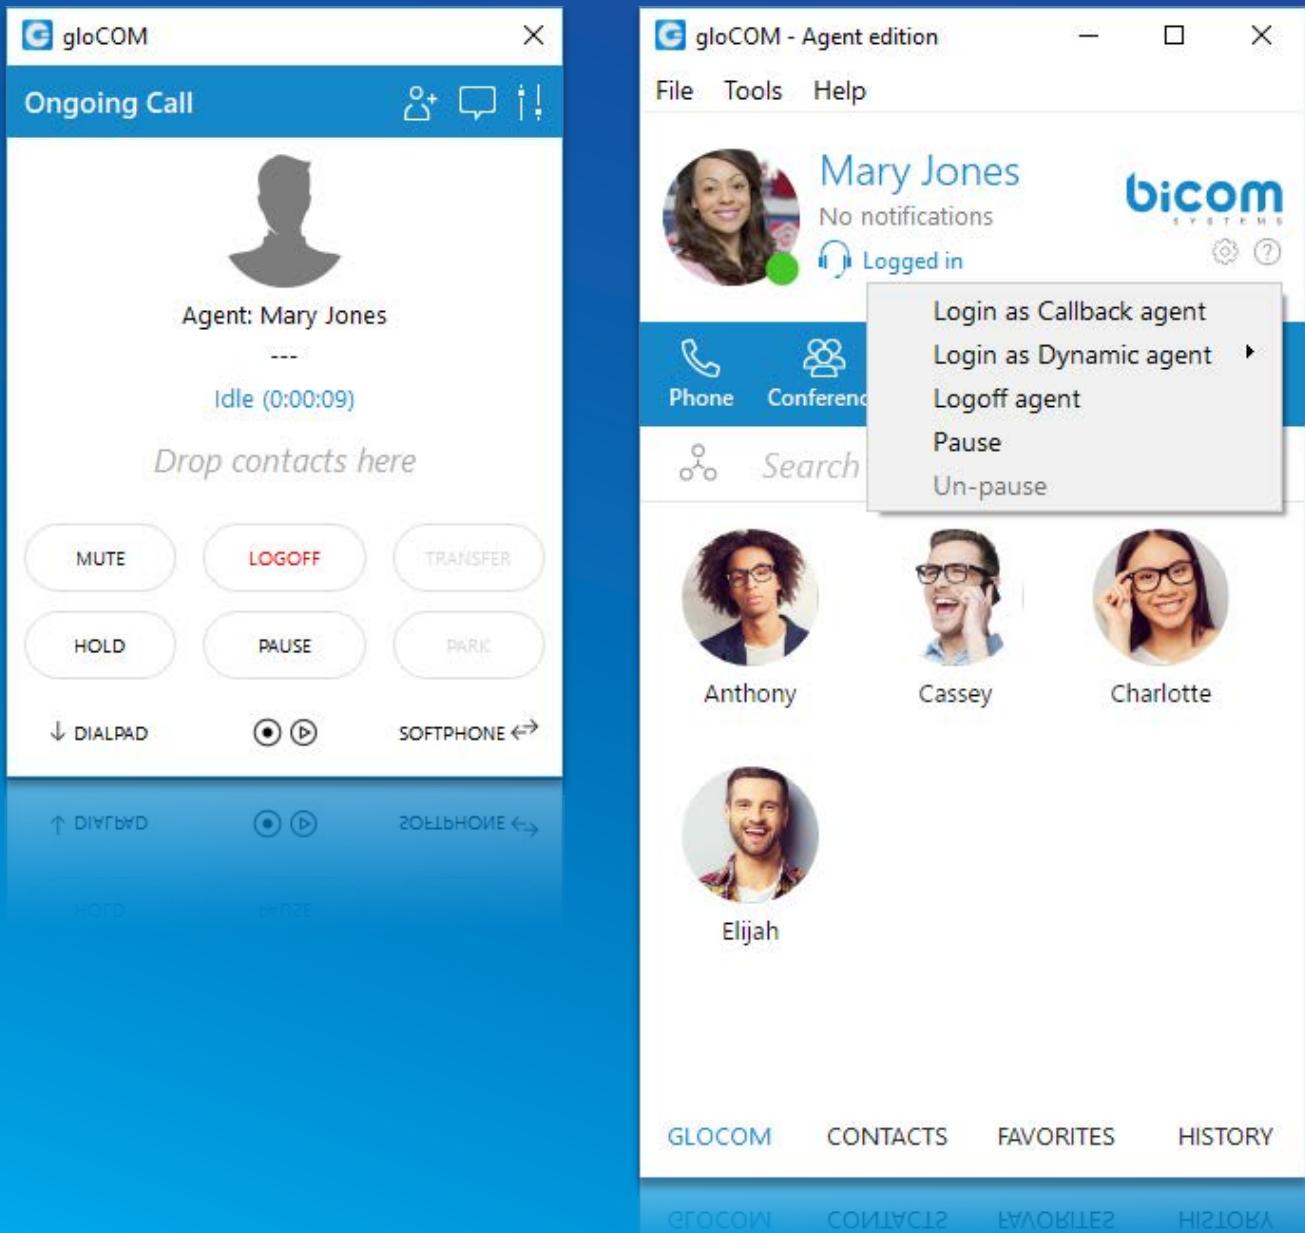

Having everything in the right place will allow an agent to do their job without the need to open multiple tabs in their browsers, the CRM add-on will open the relevant tabs from their CRM system for them.

Agent status

Agent status allows Agents to know who is available and if a call can be placed. Decisions can be made easily such as whether to forward a call or suggest a callback using dispositions.

Callback and dynamic agent

The dynamic login option allows an agent to log remotely into the queue and wait for the next call while listening to music on hold. Callback login is the traditional call center configuration where an agent will answer a ringing phone and be joined with the waiting caller.

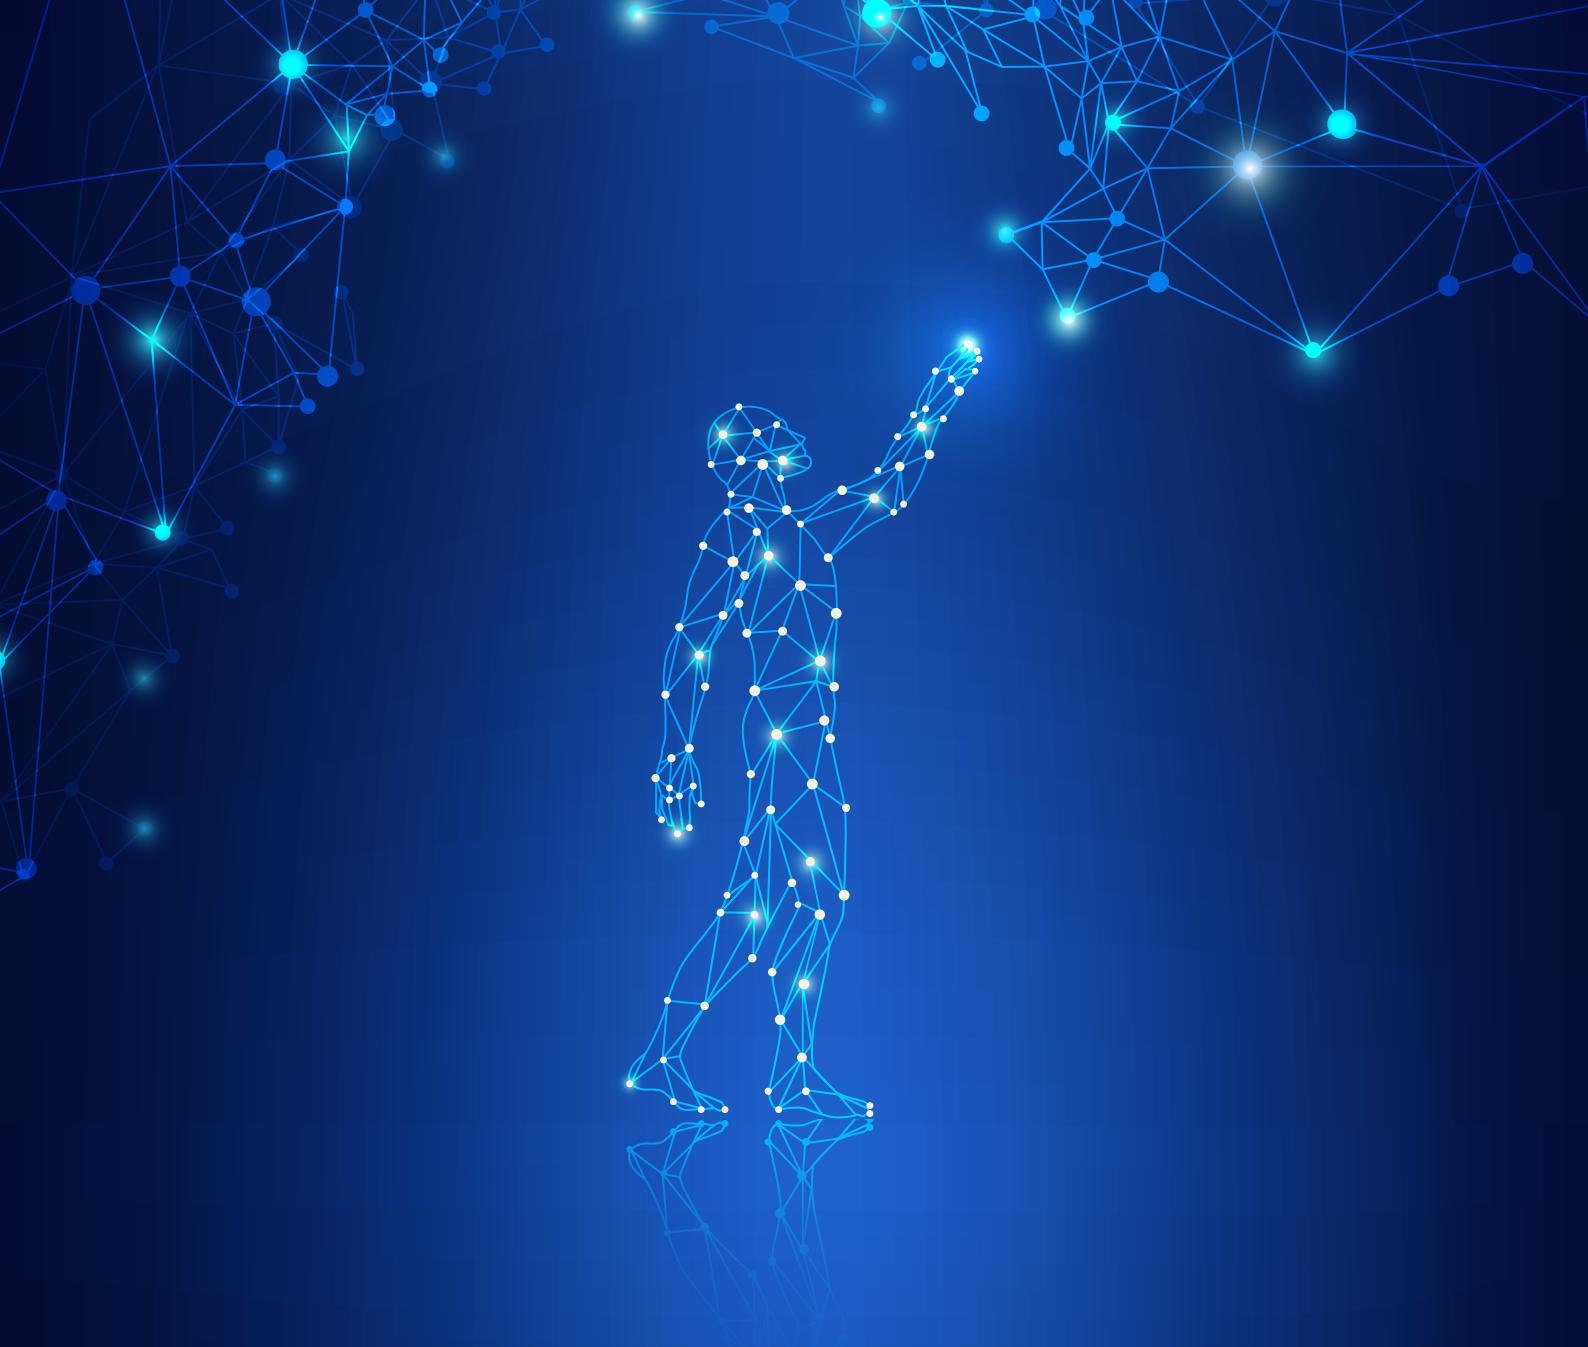

Unified Communications on Desktop & Mobile

gloCOM is a Unified Communications application available on Microsoft Windows, MAC OS and Ubuntu Linux designed to provide business users with a set of features and benefits capable of transforming a companies communications system into a real powerhouse.

While on the move – take your office with you and seamlessly transfer from desktop to your mobile device by using gloCOM GO our mobile application available on Google Android and Apple iOS.

DID YOU KNOW?

gloCOM integrates with Salesforce, ZOHO, MS Dynamics, SugarCRM, Zendesk, Bullhorn, vTiger, Pipedrive, and SuiteCRM using their REST or SOAP API. Proprietary CRMs can be integrated with gloCOM as well using our CRM SDK. This feature provides access to CRM accounts, contacts, and leads, Caller ID detection, support for uploading Call logs and Recordings, and more.

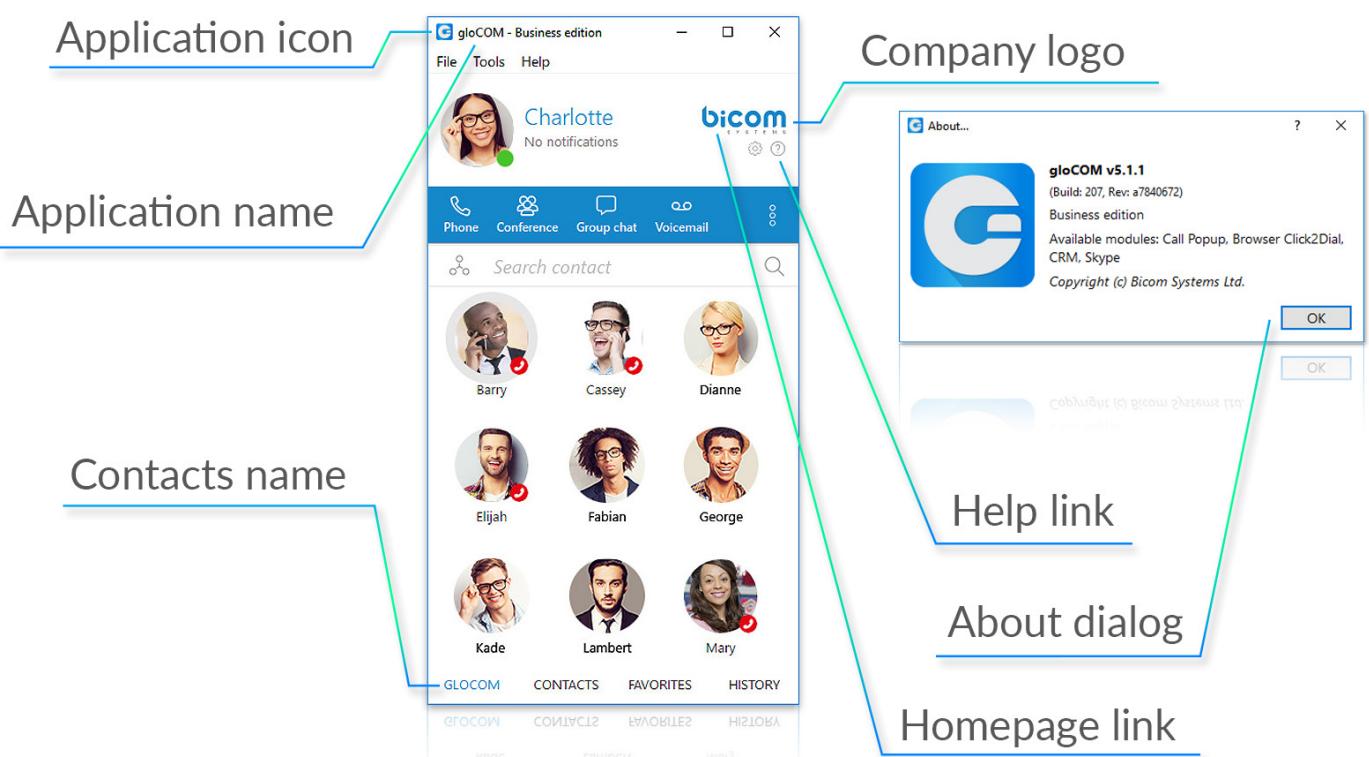

gloCOM Brands

Good branding sets you apart from the competition, improves a company's value, promotes recognition, and makes finding new customers easier. When choosing the right type of branding for your organization, there is no one-size-fits-all solution. This is why we have designed three different branding options for gloCOM.

gloCOM: Bicom Systems branded option includes the company's logo and branding.

Communicator: A non-branded option that removes all mentions of Bicom Systems. In addition to removing all of the Bicom Systems brandings from the application, users have the option to set the homepage and the help page links, as well as their own company logo via Bicom Release Manager.

OEM: Branded according to customers' specifications. This branding option removes all mentions of Bicom Systems and allows the customer to add their brand name, logo, set the homepage and the help page link, change the application name and icon.

HOSTED or ON-PREMISE

At Bicom Systems, we offer both hosted and on-premise solutions for Unified Communications. When you choose the hosted deployment option, you are relieved of the burden of purchasing and maintaining the hardware. Companies that opt for the on-premise solution have the complete control over all their servers and data.
