

5 Reasons Switching to Bicom is so Fast

1

There is no set-up required

Our system is 100% ready for your new hosted or cloud system. You will not need to purchase or install any hardware and we will not need to travel to your office to set things up. We will install your new system virtually through a few quick and secure steps. Just like that, you will be on your way.

2

All you need is your next customer

There is no need to wait around for your existing contract to end. You can start your next customer on your new Bicom Systems solution even if you are technically still tied to another vendor. We can move your other customers over in due time, but for now let's get you started with your new system!

3

Hosted solutions are designed to save time

Time-savings is simply an innate part of hosted solutions. With no customer-premise-equipment and no need for our staff to visit your location, things will move along very quickly. Troubleshooting can be done remotely as soon as necessary and the system is so easy to use that training will be minimal.

4

We have a migration team

Our team has led more transitions than we can count - we could do this in our sleep. But don't worry, we will stay wide awake as we walk you through each step of the transition process. One of our most recent customers requested an expedited process. We spent a day on training, he set-up his new system over the weekend, and he was up and running Monday morning.

5

Our solution is a true Multi-Tenant

In this industry it may be hard to believe that anything can be done quickly, but that is just one of the benefits of a true Multi-Tenant interface. It is easy to set up and integrate. Our software is intuitive and compatible. One customer expressed surprise at "how easy and smooth the transition process was."
