

PBXware version 5.1.1

Changelog March 2018

BUG FIXES:

1. Ability to add special signs and parts of JavaScript in PBXware fields
2. Removed the "Flags" folder from Custom CSS branding page
3. After upgrading PBXware from 4 to 5 a leftover parameter in extensions.conf triggers an asterisk bug causing local dialling to stop working.
4. Agents (callback or dynamic) can now login on the same extension as static members if they are not members of the same queue.
5. After restart static login members now have the correct wrap-up time and there are no errors or warnings in CLI
6. When using advanced branding, the login page displays 'Welcome to PBXware!' which cannot be changed. This is now customizable.
7. Disabled call pickup from one Tenant to another Tenant if an extension is in the same callgroup.
8. Queue call pickup group is removed.
9. Direct call parking - has to be reloaded twice to work properly.
10. Backend issues with Dynamic agent login.
11. Monitor doesn't present actual status for the extensions
12. Static IP on auto-provision and multiple devices on the same extension
13. Additional devices will stay on DHCP and will ring one or another never both at the same time.
14. Pause Reason name restricted to a smaller characters count.
15. Added PJSIP Members to Queue Statistics.

16. CSS bugs in the Setup wizard - scrollbar was always visible.
17. Single Paging functionality is not working well when the line is busy.
18. SMTP Configuration fails with Office 365 server.
19. SMTP. Custom From header now can be unset.
20. IVR Directory - selected feature not saved when reopened.

About Bicom Systems

Vision Statement

We Unify Communications!

Mission Statement

We provide the Communication World with the most Complete Turnkey Communication Systems available by Creating, Unifying and Supporting the Most Advanced of Current Technologies.

Overview

Bicom Systems was the first company to deliver Open Source Communications Software as Professional Turnkey Solutions.

By combining the best of open source telephony and its own proprietary software, Bicom Systems can provide enterprises with turnkey solutions that take account of the clients' exact needs within a very cost-effective framework - giving CIOs the safest choice. This mix includes royalty-free software, vibrant open source communities, available custom development backed up by accountable, professional support services.

The company finds innovative open source communication projects and professionalizes the project by creating, unifying and supporting turnkey systems with its proprietary in-house software. Bicom Systems provides the resources, core development and support services to enable popular open source projects to scale into enterprise-class communications software.
